# PA Criteria

### Prior Authorization Group
- **ACITRETIN**

### Drug Names
- **ACITRETIN**

### Covered Uses
All FDA-approved indications not otherwise excluded from Part D, Prevention of non-melanoma skin cancers in high risk individuals.

### Exclusion Criteria
Severely impaired liver function or kidney function. Chronic abnormally elevated blood lipid values. Concomitant use of methotrexate or tetracycline.

### Required Medical Information

### Age Restrictions
Plan Year

### Prescriber Restrictions
If the patient is female and able to bear children, female patient and/or guardian signed a Patient Agreement/Informed Consent (e.g., Do Your P.A.R.T) which includes confirmation of 2 negative pregnancy tests.

### Coverage Duration
Plan Year

### Other Criteria

---

### Prior Authorization Group
- **ACTEMRA**

### Drug Names
- **ACTEMRA**

### Covered Uses
All FDA-approved indications not otherwise excluded from Part D.

### Exclusion Criteria
Latent TB screening with either a TB skin test or an interferon gamma release assay (e.g., QFT-GIT, T-SPOT.TB) prior to initiating Actemra (or other biologic). For moderately to severely active rheumatoid arthritis (new starts only): 1) inadequate response to at least a 3-month trial of a self-injectable tumor necrosis factor (TNF) inhibitor (eg, Cimzia, Enbrel, Humira or Simponi) or Xeljanz, OR 2) intolerance or contraindication to a self-injectable TNF inhibitor or Xeljanz, OR 3) history of demyelinating disorder, heart failure, hepatitis B, or autoantibody formation/lupus like syndrome. For active polyarticular juvenile idiopathic arthritis (new starts only): 1) inadequate response to at least a 3-month trial of TNF inhibitor, OR 2) intolerance or contraindication to a TNF inhibitor. For systemic juvenile idiopathic arthritis (new starts only): 1) inadequate response to at least a 2-week trial of corticosteroid monotherapy, OR 2) inadequate response to at least a 3-month trial of methotrexate or leflunomide.

### Age Restrictions
Plan Year

### Prescriber Restrictions

### Coverage Duration

### Other Criteria

---

### Prior Authorization Group
- **ACTHAR HP**

### Drug Names
- **H.P. ACTHAR**

### Covered Uses
All FDA-approved indications not otherwise excluded from Part D.
Exclusion Criteria
Receipt of live or live attenuated vaccines in patients receiving immunosuppressive doses of H.P. Acthar Gel, suspected congenital infections in infants, scleroderma, osteoporosis, systemic fungal infection, history of or the presence of a peptic ulcer, ocular herpes simplex, congestive heart failure, recent surgery, uncontrolled hypertension, known hypersensitivity to porcine proteins, primary adrenocortical insufficiency or adrenocortical hyperfunction.

Required Medical Information
For the following diagnoses, patient must have an inadequate response to a trial of parenteral corticosteroids: 1) For rheumatic diseases (e.g., psoriatic arthritis, rheumatoid arthritis, ankylosing spondylitis): H.P. Acthar gel must be used as adjunctive treatment, 2) For nephrotic syndrome: H.P. Acthar gel must be requested for induction of diuresis or for remission of proteinuria, 3) For multiple sclerosis (MS): patient has an acute exacerbation of MS, 4) Collagen diseases (e.g., systemic lupus erythematosus, dermatomyositis, or polymyositis), 5) Dermatologic disorders (e.g., severe erythema multiforme, Stevens-Johnson syndrome), 6) Ophthalmic disorders, acute or chronic (e.g., iritis, keratitis, optic neuritis), 7) Symptomatic sarcoidosis, 8) Serum sickness.

Age Restrictions
For infantile spasms initial request: patient is less than 2 years of age.

Prescriber Restrictions

Coverage Duration
MS exacerbation: 3 weeks. Serum sickness: 1 month. All other diagnoses: 6 months. For infantile spasms: for continuation of therapy, patient must show substantial clinical benefit from therapy.

Other Criteria

Prior Authorization Group
ACTIMMUNE

Drug Names
ACTIMMUNE

Covered Uses
All FDA-approved indications not otherwise excluded from Part D, mycosis fungoides, Sezary syndrome, atopic dermatitis.

Exclusion Criteria
For chronic granulomatous disease, Actimmune is used for reducing the frequency and severity of serious infections associated with chronic granulomatous disease. For atopic dermatitis, the condition is resistant to conservative treatments (eg, topical medications, phototherapy).

Required Medical Information

Age Restrictions

Prescriber Restrictions

Coverage Duration
Plan Year

Other Criteria
Coverage under Part D will be denied if coverage is available under Part A or Part B as the medication is prescribed and dispensed or administered for the individual.

Prior Authorization Group
ADAGEN

Drug Names
ADAGEN

Covered Uses
All FDA-approved indications not otherwise excluded from Part D.
**Required Medical Information**

Severe combined immunodeficiency disease (SCID) is due to adenosine deaminase (ADA) deficiency. Condition failed to respond to bone marrow transplantation or patient is not currently a suitable candidate for bone marrow transplantation.

**Age Restrictions**

**Prescriber Restrictions**

**Coverage Duration**

Plan Year

**Other Criteria**

**Prior Authorization Group**

ADCIRCA

**Drug Names**

ADCIRCA

**Covered Uses**

All FDA-approved indications not otherwise excluded from Part D.

**Exclusion Criteria**

Patient requires nitrate therapy on a regular or intermittent basis.

**Required Medical Information**

NYHA Functional Class II or III symptoms. PAH (WHO Group 1) was confirmed by right heart catheterization. For new starts only: 1) pretreatment mean pulmonary arterial pressure is greater than or equal to 25 mmHg, 2) pretreatment pulmonary capillary wedge pressure is less than or equal to 15 mmHg, and 3) pretreatment pulmonary vascular resistance is greater than 3 Wood units.

**Age Restrictions**

**Prescriber Restrictions**

**Coverage Duration**

Plan Year

**Other Criteria**

**Prior Authorization Group**

ADEMPAS

**Drug Names**

ADEMPAS

**Covered Uses**

All FDA-approved indications not otherwise excluded from Part D.

**Exclusion Criteria**

Patient is taking a nitrate or nitric oxide donor medication (eg, amyl nitrite) on a regular or intermittent basis. Patient is taking a phosphodiesterase inhibitor (eg, sildenafil, tadalafil, vardenafil, dipyridamole, theophylline).

**Required Medical Information**

For new starts only: 1) pretreatment mean pulmonary arterial pressure is greater than or equal to 25 mmHg AND 2) pretreatment pulmonary capillary wedge pressure is less than or equal to 15 mmHg AND 3) pretreatment pulmonary vascular resistance is greater than 3 Wood units. For chronic thromboembolic pulmonary hypertension (CTEPH) (WHO Group 4): 1) CTEPH was confirmed by right heart catheterization AND by CT, MRI or pulmonary angiography AND 2) Patient has inoperable CTEPH or persistent or recurrent CTEPH after pulmonary endarterectomy. For pulmonary arterial hypertension (PAH) (WHO Group 1): 1) PAH was confirmed by right heart catheterization AND 2) NYHA Functional Class II or III symptoms.

18 years of age or older

**Age Restrictions**

**Prescriber Restrictions**

**Coverage Duration**

Plan Year

**Other Criteria**
**Prior Authorization Group**
AFINITOR

**Drug Names**
AFINITOR, AFINITOR DISPERZ

**Covered Uses**
All FDA-approved indications not otherwise excluded from Part D, lung neuroendocrine tumors, Waldenstrom’s macroglobulinemia/lymphoplasmacytic lymphoma, soft tissue sarcoma with one of the following three histologic subtypes: perivascular epithelioid cell tumors (PEComa), angiomyolipoma, lymphangioleiomyomatosis, Classical Hodgkin lymphoma

**Exclusion Criteria**
For RCC, the disease is relapsed or medically unresectable. The tumor expresses clear cell or non-clear cell histology. If clear cell histology, the patient has previous tried and failed Votrient (pazopanib) or Sutent (sunitinib). For classical Hodgkin lymphoma, Afinitor will be used as a single agent. For advanced breast cancer, patient has advanced hormone receptor positive, HER2 negative disease. Afinitor will be used in combination with exemestane. Patient’s disease has progressed within 12 months, was previously treated with a nonsteroidal aromatase inhibitor, or was previously treated with tamoxifen. For subependymal giant cell astrocytoma associated with tuberous sclerosis complex (TSC), patient is not a candidate for curative surgical resection. For renal angiomylipoma with TSC, patient does not require immediate surgery

**Age Restrictions**

**Prescriber Restrictions**

**Coverage Duration**
Plan Year

**Other Criteria**

---

**Prior Authorization Group**
ALDURAZYME

**Drug Names**
ALDURAZYME

**Covered Uses**
All FDA-approved indications not otherwise excluded from Part D.

**Exclusion Criteria**
Diagnosis of MPS I was confirmed by an enzyme assay demonstrating a deficiency of alpha-L-iduronidase enzyme activity or by DNA testing. Patients with Scheie syndrome must have moderate to severe symptoms of MPS I.

**Age Restrictions**

**Prescriber Restrictions**

**Coverage Duration**
Plan Year

**Other Criteria**

---

**Prior Authorization Group**
ALECENSA

**Drug Names**
ALECENSA

**Covered Uses**
All FDA-approved indications not otherwise excluded from Part D.
### ALPHA1-PROTEINASE INHIBITOR

**Drug Names:**
- ARALAST NP
- GLASSIA
- PROLASTIN-C
- ZEMAIRA

**Covered Uses:**
All FDA-approved indications not otherwise excluded from Part D.

**Exclusion Criteria:**
- Patients must have clinically evident emphysema.
- Patients must have a pretreatment serum alpha1-proteinase inhibitor level less than 11 micromoles/L (80 mg/dl).
- Patients must have a pretreatment post-bronchodilation FEV1 greater than, or equal to, 25 percent and less than, or equal to, 80 percent of predicted.

**Age Restrictions:**
- 18 years of age or older

**Prescriber Restrictions:**

**Coverage Duration:**
- Plan Year

---

### AMPYRA

**Drug Names:**
- AMPYRA

**Covered Uses:**
All FDA-approved indications not otherwise excluded from Part D.

**Exclusion Criteria:**
- Prior to initiating therapy, patient must demonstrate sustained walking impairment and the ability to walk 25 feet (with or without assistance). For continuation of therapy, patient must have experienced an improvement in walking speed or other objective measure of walking ability since starting Ampyra.

**Age Restrictions:**

**Prescriber Restrictions:**

**Coverage Duration:**
- Plan Year

---

### ANABOLIC STEROIDS

**Drug Names:**
- OXANDROLONE

**Covered Uses:**
All FDA-approved indications not otherwise excluded from Part D, AIDS-wasting or cachexia due to chronic disease, Turner's syndrome.

**Exclusion Criteria:**
- Pregnancy. Known or suspected carcinoma of the prostate or breast in male patients.
- Carcinoma of the breast in females with hypercalcemia. Nephrosis, the nephrotic phase of nephritis. Hypercalcemia.

**Required Medical Information:**
Patient will be monitored for peliosis hepatis, liver cell tumors and blood lipid changes.

**Age Restrictions:**

**Prescriber Restrictions:**

**Coverage Duration:**
- 6 months

**Other Criteria:**

---

### APOKYN

**Prior Authorization Group:**

---

---

**Updated 11/01/2016**
**Drug Names**
- APOKYN

**Covered Uses**
- All FDA-approved indications not otherwise excluded from Part D.

**Exclusion Criteria**
- Concomitant treatment with a serotonin 5HT3 antagonist (e.g., ondansetron, granisetron, dolasetron, palonosetron, and alosetron).

**Required Medical Information**

**Age Restrictions**
- Plan Year

**Prescriber Restrictions**

**Coverage Duration**
- Plan Year

**Other Criteria**

**Prior Authorization Group**
- ARANESP

**Drug Names**
- ARANESP ALBUMIN FREE

**Covered Uses**
- All FDA-approved indications not otherwise excluded from Part D, anemia due to myelodysplastic syndromes (MDS).

**Exclusion Criteria**
- Patients receiving chemotherapy with curative intent. Patients with myeloid cancer.

**Required Medical Information**
- For all uses: 1) Pretreatment (no erythropoietin treatment in previous month) Hgb is less than 10 g/dL, AND 2) For reauthorizations (patient received erythropoietin in previous month), an increase in Hgb of at least 1 g/dL after at least 12 weeks of therapy. Additional requirements for anemia due to myelosuppressive cancer chemotherapy: 1) For initial therapy, at least 2 more months of chemotherapy is expected, AND 2) For reauthorizations, current Hgb is less than 11 g/dL. Additional requirements for CKD not on dialysis reauthorization: 1) Current Hgb is less than or equal to 10 g/dL OR Hgb is greater than 10 but less than or equal to 12 g/dL AND prescriber will reduce or interrupt dose. Additional requirements for MDS: 1) Patient has symptomatic anemia, AND 2) Pretreatment serum erythropoietin level is less than or equal to 500 mU/mL, AND 3) For reauthorizations, current Hgb is less than or equal to 11 g/dL OR Hgb is greater than 11 but less than or equal to 12 g/dL AND prescriber will reduce or interrupt dose.

**Age Restrictions**
- 12 weeks

**Prescriber Restrictions**

**Coverage Duration**
- 12 weeks

**Other Criteria**
- Coverage under Part D will be denied if coverage is available under Part A or Part B as the medication is prescribed and dispensed or administered for the individual (eg, used for treatment of anemia for a patient with chronic renal failure who is undergoing dialysis, or furnished from physician's supply incident to a physician service). Requirements regarding Hgb values exclude values due to a recent transfusion.

**Prior Authorization Group**
- ARCALYST

**Drug Names**
- ARCALYST

**Covered Uses**
- All FDA-approved indications not otherwise excluded from Part D.

Updated 11/01/2016
Required Medical Information
The diagnosis of cystic fibrosis is confirmed by appropriate diagnostic or genetic testing. Pseudomonas aeruginosa is present in the cultures of the airway.

Age Restrictions

Prescriber Restrictions

Coverage Duration

Other Criteria

Plan Year

Prior Authorization Group
CERDELGA

Drug Names
CERDELGA

Covered Uses
All FDA-approved indications not otherwise excluded from Part D.

Exclusion Criteria
CYP2D6 extensive metabolizers and intermediate metabolizers taking a strong or moderate CYP2D6 inhibitor (e.g., paroxetine, terbinafine) concomitantly with a strong or moderate CYP3A inhibitor (e.g., ketoconazole, fluconazole). CYP2D6 intermediate metabolizers and poor metabolizers taking a strong CYP3A inhibitor (e.g., ketoconazole). CYP2D6 indeterminate metabolizers (i.e., CYP2D6 genotype cannot be determined). CYP2D6 ultra-rapid metabolizers.

Required Medical Information
Diagnosis of Gaucher disease was confirmed by an enzyme assay demonstrating a deficiency of beta-glucocerebrosidase enzyme activity or by DNA testing. The patient's CYP2D6 metabolizer status has been established using an FDA-cleared test. Patient is a CYP2D6 extensive metabolizer, an intermediate metabolizer, or a poor metabolizer.

Age Restrictions

Prescriber Restrictions

Coverage Duration

Other Criteria

18 years of age or older

Prior Authorization Group
CEREZYME

Drug Names
CEREZYME

Covered Uses
All FDA-approved indications not otherwise excluded from Part D, type 3 Gaucher disease.

Exclusion Criteria
Concomitant therapy with miglustat (Zavesca)

Required Medical Information
Diagnosis of Gaucher disease was confirmed by enzyme assay demonstrating a deficiency of beta-glucocerebrosidase enzyme activity or by DNA testing. For Type 1 Gaucher disease, patient has one or more of the following disease complications: anemia, thrombocytopenia, bone disease, hepatomegaly, or splenomegaly. For Type 3 Gaucher disease, patient has one or more of the following disease complications: anemia, thrombocytopenia, bone disease, hepatomegaly, splenomegaly, developmental delay, or ophthalmoplegia (gaze palsy).

<tr>
<td>Latent TB screening with either a TB skin test or an interferon gamma release assay (eg, QFT-GIT, T-SPOT.TB) prior to initiating CIMZIA (or other biologic). For moderately to severely active Crohn's disease (new starts only): Member meets ANY of the following: 1) Inadequate response to at least one conventional therapy (eg, corticosteroids, SSZ, azathioprine, mesalamine), 2) Intolerance or contraindication to conventional therapy. For moderately to severely active RA (new starts only): Member meets ANY of the following: 1) Inadequate response to at least a 3-month trial of methotrexate (MTX) despite adequate dosing (ie, titrated to 25-30 mg/week), 2) Intolerance or contraindication to MTX. For active psoriatic arthritis (PsA) (new starts only): Member meets ANY of the following: 1) Inadequate response to at least a 3-month trial of MTX, sulfasalazine, or leflunomide 2) Intolerance or contraindication to MTX, sulfasalazine, or leflunomide, 3) Inadequate response to at least a 3-month trial of a prior biologic DMARD, 4) Intolerance to a prior biologic DMARD, 5) Severely active PsA as evidenced by ANY of the following: a) multiple swollen joints, b) structural damage in the presence of inflammation, or c) clinically relevant extra-articular manifestations (eg, extensive skin, bowel, ocular, cardiovascular, urogenital, or pulmonary involvement), 6) Active enthesitis and/or dactylitis (i.e., sausage finger) 7) Predominant axial disease (ie, extensive spinal involvement).</td>
<td></td>
</tr>
</tbody>
</table>
Other Criteria
For active ankylosing spondylitis and axial spondyloarthritis (new starts only): 1) Inadequate response to at least a 4-week NSAID trial at maximum recommended or tolerated dose OR intolerance and/or contraindication to NSAIDs, AND 2) Member has at least ONE of the following: a) predominant axial disease (ie, extensive spinal involvement), b) inadequate response to a synthetic DMARD (eg, sulfasalazine), c) intolerance or contraindication to a synthetic DMARD, d) inadequate response to at least a 3-month trial of a prior biologic DMARD, or e) intolerance to a prior biologic DMARD.

Prior Authorization Group
CINQAIR

Drug Names
CINQAIR

Covered Uses
All FDA-approved indications not otherwise excluded from Part D.

Exclusion Criteria
Patient has a diagnosis of severe asthma with an eosinophilic phenotype. Cinqair is used in combination with other medications for the maintenance treatment of asthma. Patient has a reliever agent (i.e., short-acting beta2-agonist, low-dose combination inhaled corticosteroid/formoterol) available for rescue therapy. Cinqair is administered in a healthcare setting by a healthcare professional prepared to manage anaphylaxis. For initial therapy only: 1) Patient has baseline eosinophil count of at least 400 cells per microliter, and 2) Patient has a history of severe asthma attacks (exacerbations) despite current treatment with both of the following medications at optimized doses: a) inhaled corticosteroid AND b) additional controller (long acting beta2-agonist, leukotriene modifier, or sustained-release theophylline). For continuation therapy only: Asthma control has improved on Cinqair treatment, demonstrated by a reduction in the frequency and/or severity of symptoms and exacerbations.

Age Restrictions
18 years of age or older

CINRYZE

Drug Names
CINRYZE

Covered Uses
All FDA-approved indications not otherwise excluded from Part D, treatment of hereditary angioedema attacks.

Exclusion Criteria
Diagnosis of HAE confirmed by laboratory tests (eg, C4, C1 inhibitor functional, and C1 inhibitor antigenic protein levels)

Age Restrictions

Prescriber Restrictions

Coverage Duration
Plan Year

Other Criteria
Prior Authorization Group
CLORAZEPATE

Drug Names
CLORAZEPATE DIPOTASSIUM

Covered Uses
All FDA-approved indications not otherwise excluded from Part D.

Exclusion Criteria
1) For the management of anxiety disorders or for the short-term relief of the symptoms of anxiety, the patient has experienced an inadequate treatment response to lorazepam OR for adjunctive therapy in the management of partial seizures OR symptomatic relief in acute alcohol withdrawal AND 2) If the patient is 65 years of age or older, the benefit of therapy with the prescribed medication outweighs the potential risk. (The prescribed medication is considered a high risk medication that is considered either ineffective in most patients 65 years of age or older or that poses an unnecessarily high risk when safer alternative therapy may be available.)

COSENTYX

**Drug Names**

COSENTYX, COSENTYX SENSOREADY PEN

**Covered Uses**

All FDA-approved indications not otherwise excluded from Part D.

**Exclusion Criteria**

**Required Medical Information**

Latent TB screening with either a TB skin test or an interferon gamma release assay (e.g., QFT-GIT, T-SPOT.TB) must be performed prior to initiating Cosentyx (or other biologic). For plaque psoriasis (PsO): Member has a diagnosis of moderate to severe plaque psoriasis. At least 5% BSA is affected or crucial body areas (e.g., feet, hands, face, neck and/or groin) are affected at the time of diagnosis. For new starts, ALL of the following criteria must be met: 1) Member has experienced an inadequate response to phototherapy (e.g., UVB, PUVA), methotrexate, cyclosporine, or acitretin, unless contraindicated or intolerant to such therapies, 2) Member will be assessed for continuation of therapy after 3 months of treatment. For continuation, member must have achieved positive clinical response after 3 months of treatment or has maintained positive clinical response as evidenced by low disease activity or improvement in signs and symptoms. For active psoriatic arthritis (PsA) (new starts only): Patient meets ANY of the following: 1) Inadequate response to at least a 3-month trial of methotrexate (MTX), sulfasalazine, or leflunomide, 2) Intolerance or contraindication to MTX, sulfasalazine, or leflunomide, 3) Inadequate response to at least a 3-month trial of a prior biologic disease-modifying antirheumatic drug (DMARD), 4) Intolerance to a prior biologic DMARD, 4) Severely active PsA as evidenced by ANY of the following: a) multiple swollen joints, b) structural damage in the presence of inflammation, c) clinically relevant extra-articular manifestations (e.g., extensive skin, bowel, ocular, cardiovascular, urogenital, or pulmonary involvement), 5) Active enthesitis and/or dactylitis (i.e., sausage finger), 6) Predominant axial disease (i.e., extensive spinal involvement). For active ankylosing spondylitis (AS) (new starts only): Inadequate response to at least a 4-week NSAID trial at maximum recommended or tolerated dose OR intolerance and/or contraindication to NSAIDs.

ENTYVIO

Drug Names
ENTYVIO

Covered Uses
All FDA-approved indications not otherwise excluded from Part D.

Exclusion Criteria
For moderately to severely active Crohn's disease (CD), patient must have an inadequate response, intolerance, or contraindication to conventional therapy (eg, corticosteroids, sulfasalazine, azathioprine, 6-mercaptopurine) and a TNF-inhibitor for CD. For moderately to severely active ulcerative colitis (UC), patient must have an inadequate response, intolerance, or contraindication to conventional therapy (eg, oral aminosalicylates, corticosteroids, azathioprine, 6-mercaptopurine) and a TNF-inhibitor for UC.

Age Restrictions
18 years of age or older

Prescriber Restrictions

Coverage Duration
Initial = 4 months, renewal = Plan Year.

Other Criteria
For renewal, patient has experienced therapeutic benefit with Entyvio treatment.

Prior Authorization Group
EPO

Drug Names
EPOGEN, PROCRIT

Covered Uses
All FDA-approved indications not otherwise excluded from Part D, anemia due to myelodysplastic syndromes (MDS), anemia in congestive heart failure (CHF), anemia in rheumatoid arthritis (RA), anemia due to hepatitis C treatment (ribavirin in combination with either interferon alfa or peginterferon alfa).

Exclusion Criteria
Patients receiving chemotherapy with curative intent. Patients with myeloid cancer. Use to facilitate preoperative autologous blood donation.
**Required Medical Information**

For all uses except surgery: 1) Pretreatment (no erythropoietin treatment in previous month) Hgb is less than 10 g/dL (less than 9 g/dL for anemia in CHF only) AND 2) For reauthorizations (patient received erythropoietin in previous month), an increase in Hgb of at least 1 g/dL after at least 12 weeks of therapy. Additional requirements for anemia due to myelosuppressive cancer chemotherapy: 1) For initial therapy, at least 2 more months of chemotherapy is expected, AND 2) For reauthorizations, current Hgb is less than 11 g/dL. Additional requirements for CKD not on dialysis reauthorization: 1) Current Hgb is less than or equal to 10 g/dL OR Hgb is greater than 10 but less than or equal to 12 g/dL AND prescriber will reduce or interrupt dose. Additional requirements for MDS: 1) Patient has symptomatic anemia, AND 2) Pretreatment serum erythropoietin level is less than or equal to 500 mU/mL, AND 3) For reauthorizations, current Hgb is less than or equal to 11 g/dL OR Hgb is greater than 11 but less than or equal to 12 g/dL AND prescriber will reduce or interrupt dose. Additional requirements for HIV: 1) Concomitant use of zidovudine at a maximum dose of 4200 mg per week, AND 2) For initial therapy, pretreatment serum erythropoietin level is less than or equal to 500 mU/mL, AND 3) For reauthorizations, current Hgb is less than or equal to 11 g/dL OR Hgb is greater than 11 but less than or equal to 12 g/dL AND prescriber will reduce or interrupt dose. Additional requirements for anemia due to CHF, RA, hepatitis C treatment, or patients whose religious beliefs forbid blood transfusions: 1) For reauthorizations, current Hgb is less than or equal to 11 g/dL OR Hgb is greater than 11 but less than or equal to 12 g/dL AND prescriber will reduce or interrupt dose. For surgery: 1) Patient is scheduled for elective, noncardiac, nonvascular surgery, AND 2) Pretreatment Hgb is greater than 10 but not more than 13 g/dL.

**Age Restrictions**

**Prescriber Restrictions**

**Coverage Duration**

12 weeks

Coverage under Part D will be denied if coverage is available under Part A or Part B as the medication is prescribed and dispensed or administered for the individual (eg, used for treatment of anemia for a patient with chronic renal failure who is undergoing dialysis, or furnished from physician's supply incident to a physician service). Coverage includes use in anemia in patients whose religious beliefs forbid blood transfusions. Requirements regarding Hgb values exclude values due to a recent transfusion.

FORTEO

**Drug Names**

FORTEO

**Covered Uses**

All FDA-approved indications not otherwise excluded from Part D.

**Exclusion Criteria**

Paget’s disease of bone, unexplained elevations of alkaline phosphatase, open epiphyses (ie, pediatric or young adult patient), prior radiation therapy involving the skeleton, history of a skeletal malignancy, bone metastases, pre-existing hypercalcemia, metabolic bone disease other than osteoporosis.

**Required Medical Information**

For all indications: patient has had an oral bisphosphonate trial of at least 1-year duration unless contraindicated or intolerant to an oral bisphosphonate. For primary or hypogonadal osteoporosis and postmenopausal osteoporosis: Patient has a) a history of an osteoporotic vertebral or hip fracture OR b) a pre-treatment T-score of less than or equal to -2.5 OR c) a pre-treatment T-score of less than or equal to -1 but greater than -2.5 AND a pre-treatment FRAX score of greater than or equal to 20 percent for any major osteoporotic fracture. For glucocorticoid-induced osteoporosis in postmenopausal women and men 50 years of age or older: 1) patient is currently receiving or will be initiating glucocorticoid therapy, AND 2) patient has a) a history of fragility fracture OR b) a pre-treatment T-score of less than or equal to -2.5 OR c) a pre-treatment FRAX score of greater than or equal to 20 percent for any major osteoporotic fracture. For glucocorticoid-induced osteoporosis in premenopausal women and men less than 50 years of age: 1) patient is currently receiving or will be initiating glucocorticoid therapy AND, 2) the anticipated glucocorticoid length of therapy is at least 3 months, AND 3) patient has a history of a fragility fracture.

**Age Restrictions**

12 years of age or older

### Exclusion Criteria
Patient is female, uncontrolled thyroid or adrenal dysfunction, uncontrolled organic intracranial lesion (e.g., pituitary tumor), prostatic carcinoma or other androgen dependent neoplasm

### Required Medical Information

#### Age Restrictions

#### Prescriber Restrictions

#### Coverage Duration

#### Other Criteria

### Prior Authorization Group
GRASTEK

### Drug Names
GRASTEK

### Covered Uses
All FDA-approved indications not otherwise excluded from Part D.

### Exclusion Criteria
Severe, unstable, or uncontrolled asthma. History of any severe systemic allergic reaction or any severe local reaction to sublingual allergen immunotherapy. A history of eosinophilic esophagitis. Medical conditions that may reduce the ability of the patient to survive a serious allergic reaction or increase the risk of adverse reactions after epinephrine administration. Patient is on any medication(s) that can inhibit or potentiate the effect of epinephrine.

### Required Medical Information

#### Age Restrictions
5 through 65 years of age

#### Prescriber Restrictions
Allergist or in consultation with an allergist

#### Coverage Duration
6 months

#### Other Criteria
1) Auto-injectable epinephrine will be prescribed or available to the patient and the patient will be instructed and trained on its use AND 2) Treatment is initiated at least 12 weeks prior to expected onset of a grass pollen season AND 3) For a patient currently receiving Grastek, patient must show benefit from Grastek treatment (i.e., reduction in symptoms of allergic rhinitis and conjunctivitis, decreased use of rescue medications such as antihistamines and nasal or oral corticosteroids).

### Prior Authorization Group
GROWTH HORMONE

### Drug Names
GENOTROPIN, GENOTROPIN MINIQUICK, HUMATROPE, HUMATROPE COMBO PACK, NORDITROPIN FLEXPRO, NUTROPIN AQ NUSPIN 10, NUTROPIN AQ NUSPIN 20, NUTROPIN AQ NUSPIN 5, NUTROPIN AQ PEN, OMNITROPE, SAIZEN, SAIZEN CLICK.EASY, ZOMACTON

### Covered Uses
All FDA-approved indications not otherwise excluded from Part D including pediatric growth hormone deficiency (GHD), Turner syndrome (TS), Noonan syndrome (NS), chronic kidney disease (CKD), small for gestational age (SGA), Prader-Willi syndrome (PWS), idiopathic short stature (ISS), short stature homeobox-containing gene deficiency (SHOXD), adult GHD, HIV-associated wasting/cachexia, short bowel syndrome (SBS).
Exclusion Criteria

Active malignancy. Closed epiphyses (except PWS, adult GHD, HIV wasting/cachexia and SBS).

Required Medical Information

Pediatric GHD, TS, CKD, SHOXD, NS: 1) younger than 2.5 yrs old, when applicable: pre-tx height (ht) more than 2 SD below mean and slow growth velocity, 2) 2.5 yrs old or older: pre-tx 1-yr ht velocity more than 2 SD below mean, OR pre-tx ht more than 2 SD below mean and 1-yr ht velocity more than 1 SD below mean. Pediatric GHD: 1) failed 2 pre-tx stimulation tests (peak below 10 ng/mL) OR 2) pituitary/CNS disorder and pre-tx IGF-1 more than 2 SD below mean OR 3) patient is a neonate. TS: confirmed by karyotyping. CKD: not post-kidney transplant. SGA: 1) birth wt below 2500g at gestational age (GA) more than 37 wks OR 2) birth wt or length below 3rd percentile or at least 2 SD below mean for GA, AND 3) did not manifest catch-up growth by age 2. PWS: confirmed by 1) deletion in the chromosomal 15q11.2-q13 region OR 2) maternal uniparental disomy in chromosome 15 OR 3) imprinting defects or translocations involving chromosome 15. SHOXD: confirmed by molecular or genetic testing. ISS: 1) pediatric GHD ruled out with appropriate provocative test more than 10 ng/mL, and 2) pre-tx ht more than 2.25 SD below mean, and 3) adult ht prediction below 63 inches for boys, 59 inches for girls. Adult GHD: 1) failed 2 pre-tx stimulation tests (peak below 5 ng/mL), OR 2) structural abnormality of hypothalamus/pituitary AND 3 or more pituitary hormone deficiencies, OR 3) childhood-onset GHD with congenital (genetic/structural) abnormality of hypothalamus/pituitary/CNS, OR 4) low pre-tx IGF-1 and failed 1 pre-tx stimulation test (peak below 5 ng/mL). HIV wasting/cachexia: 1) on antiretroviral tx AND 2) suboptimal response to at least 1 other therapy for wasting/cachexia (eg, megestrol, dronabinol, cyproheptadine, or testosterone if hypogonadal) OR contraindication/intolerance to alternative therapies, AND 3) pre-tx BMI less than 18.5 kg/m2 AND unintentional wt loss greater than 5% body weight in the past 6 mos. SBS: used with optimal management of SBS.

Age Restrictions

SGA: 2 years of age or older. NS and SHOXD: 3 years of age or older.

Prescriber Restrictions

Endocrinologist, pediatric nephrologist, infectious disease specialist, gastroenterologist, nutritional support specialist.

Coverage Duration

SBS = Up to 8 wks total lifetime. HIV wasting = 12 wks. All other indications = Plan Year.

Other Criteria

Renewal for pediatric GHD, TS, NS, CKD, SGA, PWS patients with open epiphyses, ISS, or SHOXD: patient is growing more than 2 cm/year. Also for renewal for PWS only: body composition and psychomotor function have improved. Renewal for PWS patients with closed epiphyses and adult GHD patients: current IGF-1 level is normal for age and gender. Renewal for HIV-associated wasting: demonstrated response to GH therapy (ie, BMI has improved or stabilized) and BMI is less than 27 kg/m2.

Prior Authorization Group

HARVONI

Drug Names

HARVONI
**Covered Uses**

All FDA-approved indications not otherwise excluded from Part D, chronic hepatitis C genotype 4, 5, or 6 infection.

**Exclusion Criteria**

Chronic hepatitis C infection confirmed by presence of HCV RNA in the serum prior to starting tx. For G1 infection, monotherapy: 1) Total 12 wks for tx-naive pts with or without cirrhosis. Tx for 8 wks can be considered in tx-naive pts without cirrhosis who have pre-tx HCV RNA below 6 million IU/mL, 2) For pts who failed prior tx with PEG-IFN and RBV with or without HCV PI: a) total 12 wks if no cirrhosis, b) total 24 wks for cirrhosis. For G4 infection, monotherapy: Total 12 wks for pts who are tx-naive or failed prior tx with PEG-IFN and RBV. For G5 infection, monotherapy: Total 12 wks for pts who are tx-naive or failed prior tx with PEG-IFN and RBV. For G6 infection, monotherapy: Total 12 wks for pts who are tx-naive or failed prior tx with PEG-IFN and RBV. For recurrent HCV infection post liver txp, monotherapy: Total 24 wks for tx-naive pts with G1 or 4 infection and documented anemia or RBV ineligibility. For G1 infection, tx with RBV: 1) Total 12 wks for pts with cirrhosis who failed prior tx with PEG-IFN and RBV with or without an HCV PI, 2) Total 12 wks for pts without cirrhosis who failed prior tx with a SOF-containing regimen, 3) Total 24 wks for pts with cirrhosis who failed prior tx with a SOF-containing regimen. For decompensated cirrhosis (CTP class B or C), tx with RBV: 1) Total 12 wks for pts with G1 or 4 infection, 2) Total 24 wks for pts with G1 or 4 infection who failed prior tx with a SOF-containing regimen, 3) Total 12 wks for pts with recurrent G1 or 4 infection post liver txp. For recurrent HCV infection post liver txp, tx with RBV: Total 12 wks for pts with G1 or 4 infection. For HCV/HIV coinfection, pt meets all of the following: 1) Pt meets the criteria for requested regimen above, 2) Will not receive tx with cobicistat given with tenofovir, 3) Will not receive tx with tipranavir.

**Age Restrictions**

12-24 wks depending on baseline host/viral factors with reminder for 8 wk option when appropriate.

**Prescriber Restrictions**

Harvoni will not be used with other drugs containing sofosbuvir, including Sovaldi.

**Coverage Duration**

Anemia defined as baseline hemoglobin below 10g/dL, RBV ineligibility defined as intolerance to RBV, pregnant female or male whose female partner is pregnant, hemoglobinopathy, or coadministration with didanosine. tx=treatment, G=genotype, pt=patient, PEG-IFN=peginterferon alfa, RBV=ribavirin, PI=protease inhibitor, SOF=sofosbuvir, CTP=Child Turcotte Pugh, txp=transplantation, ART=antiretroviral therapy.

**Other Criteria**

Harvoni will not be used with other drugs containing sofosbuvir, including Sovaldi.

**Prior Authorization Group**

HETLIOZ

**Drug Names**

HETLIOZ

**Covered Uses**

All FDA-approved indications not otherwise excluded from Part D.

**Exclusion Criteria**

All FDA-approved indications not otherwise excluded from Part D.
**Required Medical Information**

For initial therapy and continuation of Hetlioz therapy: 1) diagnosis of Non-24 Hour Sleep-Wake Disorder, AND 2) diagnosis of total blindness in both eyes (eg, nonfunctioning retinas), AND 3) unable to perceive light in both eyes. For patients currently on Hetlioz therapy, must meet at least one of the following: 1) increased total nighttime sleep, OR 2) decreased daytime nap duration.

**Age Restrictions**

**Prescriber Restrictions**

**Coverage Duration**

Initiation: 3 Months, Renewal: Plan Year

**Other Criteria**

**Prior Authorization Group**

**Drug Names**

HIGH RISK MEDICATION

ALORA, DIGITEK, DIGOX, DIGOXIN, DISOPYRAMIDE PHOSPHATE, ESTRADIOL, FYAVOLV, GUANFACINE ER, JINTELI, LANOXIN, MEGESTROL ACETATE, MENOSTAR, MINIVELLE, NORETHINDRONE ACETATE/ETH, NORPACE CR, TRANSDERM-SCOP

**Covered Uses**

All FDA-approved indications not otherwise excluded from Part D.

**Exclusion Criteria**

**Required Medical Information**

**Age Restrictions**

**Prescriber Restrictions**

**Coverage Duration**

Plan Year

This Prior Authorization requirement only applies to patients 65 years of age or older. (In most patients 65 years of age or older, the prescribed medication is considered a high risk medication that poses an unnecessarily high risk when safer alternative therapy may be available.) Prescriber must acknowledge that medication benefits outweigh potential risks in the patient 65 years of age or older.

**Priority Authorization Group**

**Drug Names**

HRM-ANTICONVULSANTS

PHENOBARBITAL, PHENOBARBITAL SODIUM

**Covered Uses**

All FDA-approved indications not otherwise excluded from Part D.
Other Criteria

This Prior Authorization requirement only applies to patients 65 years of age or older. (In most patients 65 years of age or older, the prescribed medication is considered a high risk medication that poses an unnecessarily high risk when safer alternative therapy may be available.) 1) A non-HRM alternative formulary drug (carbamazepine, lamotrigine, topiramate) has not been tried AND 2) The patient has a contraindication to a non-HRM alternative formulary drug (carbamazepine, lamotrigine, topiramate) AND 3) Prescriber must acknowledge that medication benefits outweigh potential risks in the patient 65 years of age or older OR 4) A non-HRM alternative formulary drug (carbamazepine, lamotrigine, topiramate) has been tried AND 5) The patient experienced an inadequate treatment response OR intolerance to a non-HRM alternative formulary drug (carbamazepine, lamotrigine, topiramate) AND 6) Prescriber must acknowledge that medication benefits outweigh potential risks in the patient 65 years of age or older.

Prior Authorization Group

HRM-ANTIDEPRESSANTS TCA

Drug Names

AMITRIPTYLINE HCL, DOXEPIN HCL, IMIPRAMINE HCL, IMIPRAMINE PAMOATE, SURMONTIL, TRIMIPRAMINE MALEATE

Other Criteria

Prior Authorization Group
HUMIRA

Updated 11/01/2016
**Drug Names**

HUMIRA, HUMIRA PEDIATRIC CROHNS D, HUMIRA PEN, HUMIRA PEN-CROHNS DISEASE, HUMIRA PEN-PSORIASIS STAR

**Covered Uses**

All FDA-approved indications not otherwise excluded from Part D.

**Exclusion Criteria**

Latent TB screening with either a TB skin test or an interferon gamma release assay (e.g., QFT-GIT, T-SPOT.TB) prior to initiating Humira (or other biologic). For moderately to severely active rheumatoid arthritis (new starts only): 1) Inadequate response to at least a 3-month trial of methotrexate despite adequate dosing (i.e., titrated to 25-30 mg/week) OR 2) intolerance or contraindication to MTX OR 3) Inadequate response to at least a 3-month trial of a prior biologic DMARD or a targeted synthetic DMARD (e.g. Xeljanz) OR 4) Intolerance to a prior biologic DMARD or a targeted synthetic DMARD OR 5) Severely active RA. For moderately to severely active polyarticular juvenile idiopathic arthritis (new starts only): 1) Inadequate response to at least a 3-month trial of MTX OR 2) Intolerance or contraindication to MTX OR 3) Inadequate response to at least a 3-month trial of a prior biologic DMARD OR 4) Intolerance to a prior biologic DMARD. For active ankylosing spondylitis and axial spondyloarthritis (new starts only): 1) Inadequate response to at least a 4-week NSAID trial at maximum recommended or tolerated dose OR intolerance and/or contraindication to NSAIDs AND 2) Member has at least ONE of the following: a) Predominant axial disease (i.e., extensive spinal involvement), b) Inadequate response to a synthetic DMARD (e.g., sulfasalazine), c) Intolerance or contraindication to a synthetic DMARD, d) Inadequate response to at least a 3-month trial of a prior biologic DMARD, e) Intolerance to a prior biologic DMARD. For moderate to severe chronic plaque psoriasis (new starts only): 1) At least 5% of BSA is affected or crucial body areas (e.g., feet, hands, face, neck and/or groin) are affected AND 2) Inadequate response to either phototherapy (eg, UVB, PUVA) or a traditional systemic agent (eg, methotrexate, cyclosporine, acitretin), unless contraindicated or intolerant to such therapies.

**Age Restrictions**

**Prescriber Restrictions**

**Coverage Duration**

Plan Year
Other Criteria

For moderately to severely active Crohn's disease (new starts only): 1) Inadequate response to at least one conventional therapy (e.g., corticosteroids, sulfasalazine, azathioprine, mesalamine) OR 2) Intolerance or contraindication to conventional therapy. For moderately to severely active ulcerative colitis (new starts only): 1) Inadequate response to immunosuppressant therapy (e.g., corticosteroids, azathioprine, mercaptopurine) or intolerance or contraindication to immunosuppressant therapy AND 2) Patient is naive to TNF inhibitor therapy or patient lost response to previous TNF inhibitor therapy due to antibody formation. For active psoriatic arthritis (PsA) (new starts only): Member meets ANY of the following: 1) Inadequate response to at least a 3-month trial of MTX, sulfasalazine, or leflunomide, 2) Intolerance or contraindication to MTX, sulfasalazine, or leflunomide, 3) Inadequate response to at least a 3-month trial of a prior biologic DMARD, 4) Intolerance to a prior biologic DMARD, 5) Severely active PsA as evidenced by ANY of the following: a) multiple swollen joints, b) structural damage in the presence of inflammation, or c) clinically relevant extra-articular manifestations (e.g., extensive skin, bowel, ocular, cardiovascular, urogenital, or pulmonary involvement), 6) Active enthesitis and/or dactylitis (i.e., sausage finger) 7) Predominant axial disease (i.e., extensive spinal involvement).

Prior Authorization Group
IPRANCE

IPRANCE

Covered Uses
All FDA-approved indications not otherwise excluded from Part D.

Exclusion Criteria

Required Medical Information

Age Restrictions

Prescriber Restrictions

Coverage Duration
Plan Year

Other Criteria

Prior Authorization Group
ICLUSIG

Drug Names
ICLUSIG

Covered Uses
All FDA-approved indications not otherwise excluded from Part D.

Exclusion Criteria

Required Medical Information
Diagnosis of CML or Ph+ ALL was confirmed by detection of the Philadelphia chromosome or BCR-ABL gene.

Age Restrictions
18 years of age or older

Prescriber Restrictions

Coverage Duration
Plan Year

Other Criteria
Patient will be monitored for evidence of thromboembolism and vascular occlusion. Cardiac and hepatic function will be monitored.

Prior Authorization Group
IMATINIB

Updated 11/01/2016
Drug Names: IMATINIB MESYLATE
Covered Uses: All FDA-approved indications not otherwise excluded from Part D, desmoid tumors, pigmented villonodular synovitis/tenosynovial giant cell tumor (PVNS/TGCT), chordoma, and melanoma.

Exclusion Criteria
Required Medical Information: Diagnosis of CML or Ph+ ALL was confirmed by detection of the Philadelphia chromosome or BCR-ABL gene. For CML, patient did not fail (excluding failure due to intolerance) prior therapy with a tyrosine kinase inhibitor (dasatinib, nilotinib, bosutinib, ponatinib). For myelodysplastic/myeloproliferative disease, disease is associated with PDGFR gene re-arrangements. For aggressive systemic mastocytosis, D816V c-Kit mutation is negative or unknown. For melanoma, c-Kit mutation is positive. Patient has one of the following diagnoses: gastrointestinal stromal tumor, hypereosinophilic syndrome, chronic eosinophilic leukemia, desmoid tumor, dermatofibrosarcoma protuberans, PVNS/TGCT, or chordoma.

Age Restrictions
Prescriber Restrictions
Coverage Duration: Plan Year
Other Criteria

Prior Authorization Group: IMBRUVICA
Drug Names: IMBRUVICA
Covered Uses: All FDA-approved indications not otherwise excluded from Part D, small lymphocytic lymphoma, lymphoplasmacytic lymphoma.

Exclusion Criteria
Required Medical Information: For Waldenstrom's macroglobulinemia and lymphoplasmacytic lymphoma (WM/LPL): Imbruvica is used as a single agent.

Age Restrictions
Prescriber Restrictions
Coverage Duration: Plan Year
Other Criteria

Prior Authorization Group: INCRELEX
Drug Names: INCRELEX
Covered Uses: All FDA-approved indications not otherwise excluded from Part D.

Exclusion Criteria
Required Medical Information: Must meet all of the following prior to beginning Increlex therapy (new starts only): 1) height 3 or more standard deviations below the mean for children of the same age and gender AND 2) basal IGF-1 level 3 or more standard deviations below the mean for children of the same age and gender AND 3) stimulation test showing a normal or elevated growth hormone level. For renewal, patient is growing more than 2 cm/year AND the current IGF-1 level is normal for age and gender.
Prescriber Restrictions: Endocrinologist

Coverage Duration: Plan Year

Other Criteria:

Prior Authorization Group: INLYTA
Drug Names: INLYTA
Covered Uses: All FDA-approved indications not otherwise excluded from Part D, papillary, Hurthle cell, or follicular thyroid carcinoma

Exclusion Criteria:

Required Medical Information:
For renal cell carcinoma, the disease is relapsed or medically unresectable. The medication will be used as a single agent. The tumor expresses predominantly clear cell or non-clear cell histology. If clear cell, the patient has previous tried and failed, or had an intolerance or contraindication to, Votrient (pazopanib) or Sutent (sunitinib). For thyroid carcinoma, the disease has papillary, Hurthle cell, or follicular histology. Nexavar is not an appropriate option for the patient. The disease is unresectable or metastatic. The disease is radioiodine refractory. The disease is progressive or symptomatic.

Age Restrictions:

Prescriber Restrictions: Plan Year

Coverage Duration: Plan Year

Other Criteria:

Prior Authorization Group: IRESSA
Drug Names: IRESSA
Covered Uses: All FDA-approved indications not otherwise excluded from Part D.

Exclusion Criteria:

Required Medical Information:

Age Restrictions: Plan Year

Prescriber Restrictions: Plan Year

Coverage Duration: Plan Year

Other Criteria:

Prior Authorization Group: ITRAConazole
Drug Names: ITRAConazole
Covered Uses: All FDA-approved indications not otherwise excluded from Part D, Coccidioidomycosis, Cryptococcosis, Sporotrichosis, Penicilliosis, Microsporidiosis, Pityriasis versicolor/Tinea versicolor, Tinea corporis/Tinea cruris, Tinea manuum/Tinea pedis.

Exclusion Criteria:
Evidence of ventricular dysfunction, such as congestive heart failure (CHF). Current use of certain drugs metabolized by CYP3A4.
**Required Medical Information**

1) If for the treatment of onychomycosis due to tinea, the diagnosis has been confirmed with a fungal diagnostic test OR 2) Pityriasis versicolor or Tinea versicolor OR 3) If for the treatment of tinea corporis, tinea cruris, tinea manuum, tinea pedis, the patient has experienced either an inadequate treatment response, adverse event, intolerance, or contraindication to griseofulvin OR 4) Diagnosis of blastomycosis, histoplasmosis, aspergillosis, coccidioidomycosis, cryptococcosis, sporotrichosis, penicilliosis, microsporidiosis.

**Age Restrictions**

**Prescriber Restrictions**

**Coverage Duration**

Onychomycosis, Versicolor (pityriasis or tinea), Tinea-3mo, Systemic infection-6mo

Criteria apply to capsule dosage form only.

**Other Criteria**

**Prior Authorization Group**

IVIG

**Drug Names**

BIVIGAM, CARIMUNE NANOFILTERED, FLEBOGAMMA, FLEBOGAMMA DIF, GAMMAGARD LIQUID, GAMMAGARD S/D, GAMMAGARD S/D IGA LESS TH, GAMMAKED, GAMMAPLEX, GAMUNEX-C, OCTAGAM

**Covered Uses**

All FDA-approved indications not otherwise excluded from Part D, chronic inflammatory demyelinating polyneuropathy, multifocal motor neuropathy, dermatomyositis, polymyositis, Guillain-Barre syndrome (GBS), relapsing-remitting multiple sclerosis (RRMS), myasthenia gravis, Lambert-Eaton myasthenic syndrome, Kawasaki syndrome, idiopathic thrombocytopenic purpura, pure red cell aplasia (PRCA), fetal/neonatal alloimmune thrombocytopenia, and prophylaxis of bacterial infections in B-cell chronic lymphocytic leukemia (CLL), bone marrow/hematopoietic stem cell transplant (BMT/HSCT) recipients, and pediatric HIV infection.

**Exclusion Criteria**

IgA deficiency with antibodies to IgA and a history of hypersensitivity. History of anaphylaxis or severe systemic reaction to human immune globulin or product components.
**Required Medical Information**

For dermatomyositis and polymyositis: standard 1st line treatments (corticosteroids or immunosuppressants) have been tried but were unsuccessful or not tolerated OR patient is unable to receive standard therapy because of a contraindication or other clinical reason. For GBS: physical mobility must be severely affected such that the patient requires an aid to walk AND IVIG therapy must be initiated within 2 weeks of symptom onset. For RRMS: standard 1st line treatments (interferon or glatiramer) have been tried but were unsuccessful or not tolerated OR patient is unable to receive standard therapy because of a contraindication or other clinical reason. For CLL: serum IgG less than 500 mg/dL OR a history of recurrent bacterial infections. For BMT/HSCT: serum IgG less than 400 mg/dL. For pediatric HIV infection: serum IgG less than 400 mg/dL OR a history of recurrent bacterial infections. PRCA is secondary to parvovirus B19 infection. For all indications: patients with any of the following risk factors for renal dysfunction must receive the minimum dose or concentration available of IVIG and the minimum infusion rate practicable: pre-existing renal insufficiency, diabetes mellitus, age over 65 years, volume depletion, sepsis, paraproteinemia, or receiving concomitant nephrotoxic drugs. For all indications: patients with any of the following risk factors for thrombosis must receive the minimum dose or concentration available of IVIG and the minimum infusion rate practicable: age 45 years or older, prolonged immobilization, hypercoagulable conditions, history of venous or arterial thrombosis, use of estrogens, indwelling central vascular catheters, hyperviscosity, or cardiovascular risk factors. For pediatric HIV infection: age 12 years or younger

**Other Criteria**

**Prior Authorization Group**

**Drug Names**

**Covered Uses**

Plan Year

Coverage under Part D will be denied if coverage is available under Part A or Part B as the medication is prescribed and dispensed or administered for the individual.

For polycythemia vera, patient has had an inadequate response to or is intolerant of hydroxyurea.

Plan Year
**Exclusion Criteria**
For initiation of treatment, moderate or severe hepatic impairment (eg, Child-Pugh B or C). For renewal, ALT or AST equal to or greater than 5 times the upper limit normal (ULN), or equal to greater than 3x ULN with signs or symptoms of liver toxicity or injury, increases in bilirubin greater than 2x ULN or active liver disease.

**Required Medical Information**
For initiation of therapy, 1. Patient has a diagnosis of homozygous familial hypercholesterolemia confirmed by one of the following: A. documented mutations in both alleles at LDL receptor, ApoB, PCSK9, or ARH adapter protein gene locus, B. documented skin fibroblast LDL receptor activity less than 20% of normal, OR C. the following criteria are met: a) untreated LDL-C greater than 500 mg/dL or unknown AND b) triglyceride level less than 350 mg/dL AND c) tendon or cutaneous xanthomas at age 10 or younger OR d) both parents with a history of LDL-C greater than 190 mg/dL, AND 2. Prior to initiation of treatment with Juxtapid, patient is/was receiving a current combination lipid-lowering regimen consisting of at least 3 of the following treatment options for at least 3 months: A. LDL apheresis, AND/OR B. For adults: atorvastatin 80mg, rosuvastatin 40mg, simvastatin 40-80mg, cholestyramine 24g, colescevelam 3.75g, colestipol 16g, ezetimibe 10mg, gemfibrozil 1200mg, or any fenofibrate or fenofibric acid product at doses greater than 105mg OR C. For children and adolescents: lipid lowering medications listed above at maximum tolerated doses AND 3. Prior to initiation of treatment with Juxtapid, patient is/was experiencing an inadequate response to such combination regimen, as demonstrated by one of the following: A. treated LDL-C greater than 300 mg/dL OR B. treated LDL-C greater than 200 mg/dL with a documented history of a) myocardial infarction, b) coronary bypass graft surgery, c) coronary arteriogram demonstrating significant coronary artery disease or percutaneous transluminal coronary angioplasty (PTCA) with or without atherectomy or coronary stent placement, or d) significant angina pectoris with a positive thallium or other heart scanning stress test. For renewal of therapy, 1. Patient meets all initial criteria AND 2. Current LDL-C is at least 20% lower from the levels immediately prior to initiation of treatment with Juxtapid.

**Age Restrictions**

**Prescriber Restrictions**
Lipid specialist or cardiometabolic specialist

**Coverage Duration**
Plan Year

**Other Criteria**

**Prior Authorization Group**
KALYDECO

**Drug Names**
KALYDECO

**Covered Uses**
All FDA-approved indications not otherwise excluded from Part D
**Required Medical Information**
The patient has a diagnosis of cystic fibrosis. The patient has one of the following documented mutations to the CFTR gene that was confirmed by genetic testing: G551D, G1244E, G1349D, G178R, G551S, S1251N, S1255P, S549N, S549R, or R117H.

**Age Restrictions**
Granules: 2 years of age and older, Tablets: 6 years of age and older

**Prescriber Restrictions**

**Coverage Duration**
Plan Year

**Other Criteria**

**Prior Authorization Group**

**Drug Names**
KETOCONAZOLE

**Covered Uses**
All FDA-approved indications not otherwise excluded from Part D, Cushing’s syndrome.

**Exclusion Criteria**
Acute or chronic liver disease. Current use with dofetilide, quinidine, pimozide, cisapride, methadone, disopyramide, dronedarone, ranolazine.

**Required Medical Information**
The patient's liver status will be assessed prior to therapy and as needed during therapy.

**Age Restrictions**

**Prescriber Restrictions**

**Coverage Duration**
6 months

**Other Criteria**
1) Patient has one of the following diagnoses: blastomycosis, coccidioidomycosis, histoplasmosis, chromomycosis, and paracoccidioidomycosis AND other antifungal therapies are ineffective, unavailable, or not tolerated OR 2) Ketoconazole (Nizoral) is being prescribed for a patient with Cushing's syndrome who cannot tolerate surgery or surgery has not been curative.

**Prior Authorization Group**
KEVEYIS

**Drug Names**
KEVEYIS

**Covered Uses**
All FDA-approved indications not otherwise excluded from Part D.

**Exclusion Criteria**
Severe pulmonary disease, hepatic insufficiency, concomitant use of high-dose aspirin
For primary HYPOkalemic periodic paralysis: 1) The diagnosis was supported by genetic test results, OR 2) patient has a family history of primary hypokalemic periodic paralysis, OR 3) patient's attacks are associated with hypokalemia AND both Andersen-Tawil syndrome and thyrotoxic periodic paralysis have been ruled out. For primary HYPERkalemic periodic paralysis: 1) The diagnosis was supported by genetic test results, OR 2) patient has a family history of primary hyperkalemic periodic paralysis, OR 3) patient's attacks are associated with hyperkalemia AND Andersen-Tawil syndrome has been ruled out.

**Age Restrictions**

**Prescriber Restrictions**

**Coverage Duration**
Initial: 2 months. Continuation: 12 months.
Keveyis is used as maintenance therapy to prevent attacks. For continuation of therapy, patient is demonstrating a response to Keveyis therapy as demonstrated by a decrease in the number of attacks.

**Prior Authorization Group**  
**Drug Names**  
**KEYTRUDA**  
**Covered Uses**  
All FDA-approved indications not otherwise excluded from Part D.

**Exclusion Criteria**  
**Required Medical Information**  
For melanoma: Patient has unresectable or metastatic disease. For NSCLC: Patient has metastatic disease and tumor is positive for PD-L1 protein expression. 
Documentation of testing for PD-L1 protein expression, EGFR mutation, and ALK mutation. Patient meets one of the following criteria: 1) negative for the EGFR and ALK mutation and has experienced disease progression on platinum-containing chemotherapy OR 2) positive for the EGFR mutation and has experienced disease progression on EGFR targeted therapy (eg., erlotinib, afatinib) OR 3) positive for the ALK mutation and has experienced disease progression on ALK targeted therapy (eg., crizotinib, ceritinib)

#### Prescriber Restrictions

#### Coverage Duration
Initial: 1 month. Continuation of treatment: Plan Year.

#### Other Criteria

### Prior Authorization Group
KYNAMRO

### Drug Names
KYNAMRO

### Covered Uses
All FDA-approved indications not otherwise excluded from Part D.

### Exclusion Criteria
For initiation of treatment, moderate or severe hepatic impairment (eg, Child-Pugh B or C). For renewal, ALT or AST equal to or greater than 5 times the upper limit normal (ULN), or equal to greater than 3x ULN with signs or symptoms of liver toxicity or injury, increases in bilirubin greater than 2x ULN or active liver disease.
**Required Medical Information**

For initiation of therapy, all of the following requirements are met: 1) Patient has a diagnosis of homozygous familial hypercholesterolemia confirmed by one of the following: a) documented mutations in both alleles at LDL receptor, ApoB, PCSK9, or ARH adapter protein gene locus, b) documented skin fibroblast LDL receptor activity less than 20% of normal, OR c) the following criteria are met: i) untreated LDL-C greater than 500 mg/dL or unknown AND ii) triglyceride level less than 350 mg/dL AND iii) tendon or cutaneous xanthomas at age 10 or younger or both parents with a history of LDL-C greater than 190 mg/dL, AND 2) Prior to initiation of treatment with Kynamro, patient is/was receiving a current combination lipid-lowering regimen consisting of at least three of the following treatment options for at least 3 months: a) For adults: atorvastatin 80mg, rosuvastatin 40mg, simvastatin 40-80mg, cholestyramine 24g, colesuevelam 3.75g, colestipol 16g, ezetimibe 10mg, gemfibrozil 1200mg, or any fenofibrate or fenofibric acid product at doses greater than 105mg, b) For children and adolescents: lipid lowering medications listed above in a) at maximum tolerated doses, AND 3) Prior to initiation of treatment with Kynamro, patient is/was experiencing an inadequate response to such combination regimen, as demonstrated by one of the following: a) treated LDL-C greater than 300 mg/dL OR b) treated LDL-C greater than 200 mg/dL with a documented history of myocardial infarction, coronary bypass graft surgery, coronary arteriogram demonstrating significant coronary artery disease, percutaneous transluminal coronary angioplasty (PTCA) with or without atherectomy, coronary stent placement, or significant angina pectoris with a positive thallium or other heart scanning stress test. For renewal of therapy, Patient meets all criteria for initiation of therapy AND current LDL-C is at least 20% lower from levels immediately prior to initiation of treatment with Kynamro.

LEMTRADA

**Drug Names**

LEMTRADA

**Covered Uses**

All FDA-approved indications not otherwise excluded from Part D.

**Exclusion Criteria**

Human immunodeficiency virus (HIV) infection

**Required Medical Information**

Member has a diagnosis of a relapsing form of multiple sclerosis (MS) (eg, relapsing-remitting MS, progressive-relapsing MS, or secondary progressive MS with relapses). For First Course, member has had an inadequate response to two or more drugs indicated for MS despite adequate duration of treatment. For Second Course, member received the first course of treatment (ie, five 12-mg infusions) at least 12 months prior to the planned date of the first dose of the second course.
Prescriber Restrictions
Coverage Duration
Other Criteria

For first course, 5 days. For second course, 3 days.

Exclusion Criteria

Use of Leukine within 24 hours preceding or following chemotherapy or radiotherapy. For treatment of chemotherapy-induced FN, patient received prophylactic pegylated G-CSF (eg, Neulasta) during the current chemotherapy cycle.

All FDA-approved indications not otherwise excluded from Part D.

All FDA-approved indications not otherwise excluded from Part D.

Plan Year

All FDA-approved indications not otherwise excluded from Part D, chemotherapy-induced febrile neutropenia (FN), following chemotherapy for acute lymphocytic leukemia (ALL) or acute myeloid leukemia (AML), myelodysplastic syndromes (MDS), agranulocytosis, aplastic anemia, HIV-related neutropenia.

Use of Leukine within 24 hours preceding or following chemotherapy or radiotherapy. For treatment of chemotherapy-induced FN, patient received prophylactic pegylated G-CSF (eg, Neulasta) during the current chemotherapy cycle.
**Required Medical Information**  
For prophylaxis of myelosuppressive chemotherapy-induced FN: 1) Patient has a non-myeloid cancer AND 2) Patient is currently receiving or will be receiving treatment with myelosuppressive anti-cancer therapy. For treatment of myelosuppressive chemotherapy-induced FN: 1) Patient has a non-myeloid cancer AND 2) Patient is currently receiving or has received treatment with myelosuppressive anti-cancer therapy. For MDS: Patient has neutropenia and recurrent or resistant infections.

LONSURF

**Drug Names**  
LONSURF

**Covered Uses**  
All FDA-approved indications not otherwise excluded from Part D.

**Exclusion Criteria**

**Required Medical Information**  
For metastatic colorectal cancer, KRAS (with or without NRAS) mutation testing is performed on either the primary tumor or metastases to confirm RAS mutation status. The patient must have been previously treated with fluoropyrimidine-, oxaliplatin- and irinotecan-based chemotherapy, an anti-VEGF therapy, and, if KRAS or NRAS wild type, an anti-EGFR therapy.

**Age Restrictions**

**Prescriber Restrictions**

**Coverage Duration**

**Plan Year**

**Other Criteria**

**Prior Authorization Group**  
LOTRONEX

**Drug Names**  
ALOSETRON HYDROCHLORIDE

**Covered Uses**  
All FDA-approved indications not otherwise excluded from Part D.
**Exclusion Criteria**

Patient has a history of any of the following conditions: Chronic or severe constipation or sequelae from constipation. Intestinal obstruction, stricture, toxic megacolon, gastrointestinal perforation, and/or adhesions. Ischemic colitis. Impaired intestinal circulation, thrombophlebitis or hypercoagulable state. Crohn's disease or ulcerative colitis. Diverticulitis. Severe hepatic impairment.

**Required Medical Information**

1) Lotronex is being prescribed for a woman with a diagnosis of severe diarrhea-predominant irritable bowel syndrome (IBS) AND 2) chronic IBS symptoms lasting at least 6 months AND 3) gastrointestinal tract abnormalities have been ruled out AND 4) inadequate response to conventional therapy.

Plan Year

**Other Criteria**

**Prior Authorization Group**

LUMIZYME

**Drug Names**

LUMIZYME

**Covered Uses**

All FDA-approved indications not otherwise excluded from Part D.

**Exclusion Criteria**

**Required Medical Information**

Diagnosis of Pompe disease was confirmed by an enzyme assay demonstrating a deficiency of GAA enzyme activity or by DNA testing that identifies mutations in the GAA gene.

**Age Restrictions**

**Prescriber Restrictions**

**Coverage Duration**

Plan Year

**Other Criteria**

**Prior Authorization Group**

LUPANETA

**Drug Names**

LUPANETA PACK

**Covered Uses**

All FDA-approved indications not otherwise excluded from Part D.

**Exclusion Criteria**

**Required Medical Information**

For retreatment patient must meet all of the following (one-time retreatment course allowed): 1) Patient has had a recurrence of symptoms, AND 2) Bone mineral density is within normal limits.

**Age Restrictions**

18 years of age or older

**Prescriber Restrictions**

**Coverage Duration**

6 months

**Other Criteria**

**Prior Authorization Group**

LUPRON

**Drug Names**

LEUPROLIDE ACETATE, LUPRON DEPOT, LUPRON DEPOT-PED
**Covered Uses**

All FDA-approved indications not otherwise excluded from Part D, breast cancer (Lupron Depot 3.75mg only), ovarian stromal tumors (Lupron Depot 3.75mg and Lupron Depot 3-Month 11.25mg only), epithelial ovarian cancer/fallopian tube cancer/primary peritoneal cancer (Lupron Depot 3.75mg only), in combination with growth hormone for children with growth failure and advancing puberty (leuprolide acetate only).

**Exclusion Criteria**

Pregnancy for female patients except for children with CPP. Breastfeeding (Lupron Depot 3.75mg and Lupron Depot 3-Month 11.25mg). Undiagnosed abnormal vaginal bleeding (Lupron Depot 3.75mg and Lupron Depot 3-Month 11.25mg).

**Required Medical Information**

For prostate cancer: If the patient (pt) has metastatic disease (ds), node positive ds, or recurrent ds as defined as a biochemical failure after previous therapy, then no further information is required. If the pt has none of the abovementioned criteria and has intermediate or high risk stratification (RS), then the medication must be used with external beam radiation therapy. If the pt has none of the abovementioned criteria and has very high RS, the medication may be used with radiation therapy unless the pt is not a candidate for definitive therapy. For endometriosis retreatment, pt must meet all of the following: 1) Pt has had a recurrence of symptoms AND 2) Pt will be receiving add-back therapy (eg, norethindrone) AND 3) Bone mineral density (BMD) is within normal limits (WNL). For uterine fibroids (UF), pt must meet one of the following: 1) Diagnosis of anemia (ie, hematocrit less than or equal to 30 percent and/or hemoglobin less than or equal to 10g/dL) AND Lupron Depot will be used in conjunction with iron therapy OR 2) Lupron Depot will be used in the preoperative setting to facilitate surgery. For UF retreatment, BMD is WNL. For epithelial ovarian cancer/fallopian tube cancer/primary peritoneal cancer: Lupron Depot (3.75mg only) will be used as a single agent AND disease is persistent or recurrent. For breast cancer, Lupron Depot (3.75mg only), pt must meet both of the following: 1) Premenopausal woman AND 2) Hormone receptor positive disease. For CPP (Lupron Depot-PED), patients not currently receiving therapy must meet all of the following: 1) Diagnosis of CPP confirmed by a) A pubertal response to a GnRH agonist OR a basal 3rd generation LH level AND b) Assessment of bone age versus chronological age AND c) Appropriate diagnostic imaging of the brain has been done to exclude an intracranial tumor, AND 2) The onset of sexual characteristics occurred prior to 8 years of age for female patients OR prior to 9 years of age for male patients.

**Age Restrictions**

For endometriosis, fibroids, breast cancer, ovarian stromal tumors, epithelial ovarian cancer/fallopian tube cancer/primary peritoneal cancer: 18 years of age or older. CPP: Patient must be less than 12 years old if female and less than 13 years old if male.

**Prescriber Restrictions**

**Coverage Duration**

Fibroids: 3 mo, max 6 mo (lifetime). Endometriosis: 6 mo, max 12 mo (lifetime). Others: Plan Year.
Other Criteria
For prostate cancer, the medication will not be used as neoadjuvant androgen deprivation therapy (ADT) before radical prostatectomy.

Exclusion Criteria
**Required Medical Information**

Pretreatment (no Mircera treatment in previous two months or other erythropoietin treatment in previous month) Hgb is less than 10 g/dL. For reauthorizations (patient received Mircera in previous two months or other erythropoietin in previous month): 1) an increase in Hgb of at least 1 g/dL after at least 12 weeks of therapy, AND 2) current Hgb is less than or equal to 10 g/dL OR Hgb is greater than 10 but less than or equal to 12 g/dL AND prescriber will reduce or interrupt dose.

**Age Restrictions**

18 years of age or older

**Prescriber Restrictions**

**Coverage Duration**

12 weeks

**Other Criteria**

Coverage under Part D will be denied if coverage is available under Part A or Part B as the medication is prescribed and dispensed or administered for the individual (eg, used for treatment of anemia for a patient with chronic renal failure who is undergoing dialysis, or furnished from physician's supply incident to a physician service). Requirements regarding Hgb values exclude values due to a recent transfusion.

**Prior Authorization Group**

MODAFINIL

**Drug Names**

MODAFINIL

**Covered Uses**

All FDA-approved indications not otherwise excluded from Part D.

**Exclusion Criteria**

1) Diagnosis is narcolepsy confirmed by sleep lab evaluation OR 2) Diagnosis is obstructive sleep apnea (OSA) confirmed by polysomnography OR 3) Diagnosis is shift work disorder (SWD).

Prior Authorization Group
NATPARA

Drug Names
NATPARA

Covered Uses
All FDA-approved indications not otherwise excluded from Part D

Exclusion Criteria
Acute postsurgical hypoparathyroidism (within 6 months of surgery).
Hypoparathyroidism due to calcium-sensing receptor mutations. Any of the following risk factors for osteosarcoma: Paget's disease of bone, unexplained elevations of alkaline phosphatase, open epiphyses (ie, children or young adults), hereditary disorder that predisposes to osteosarcoma, or history of external beam or implant radiation therapy involving the skeleton.
**Required Medical Information**

Natpara is prescribed to control hypocalcemia associated with hypoparathyroidism. Natpara will be used in conjunction with calcium supplements with or without calcitriol (activated vitamin D). For initial therapy only: 1) total serum calcium levels are inadequately controlled despite treatment with optimized doses of calcium supplements and calcitriol, 2) total serum calcium level (albumin-corrected) is above 7.5 mg/dL, 3) serum 25-hydroxyvitamin D level is within the normal range, and 4) serum magnesium level is within the normal range. For continuation of therapy only: 1) total serum calcium level (albumin-corrected) is within the low-normal range (generally between 8 mg/dL and 9 mg/dL) OR the dose of Natpara, calcitriol, or calcium supplement is being adjusted to achieve total serum calcium levels within the low-normal range, AND 2) serum 25-hydroxyvitamin D level is within the normal range.

**Other Criteria**

**Prior Authorization Group**

NEXAVAR

**Drug Names**

NEXAVAR

**Covered Uses**

All FDA-approved indications not otherwise excluded from Part D, osteosarcoma, angiosarcoma, desmoid tumors (aggressive fibromatosis), progressive gastrointestinal stromal tumor (GIST), medullary thyroid carcinoma

**Exclusion Criteria**
**Required Medical Information**

For renal cell carcinoma, patient has relapsed or medically unresectable disease and Nexavar will be used as a single agent. If clear cell histology, the patient has previous tried and failed, or had an intolerance or contraindication to, Votrient (pazopanib) or Sutent (sunitinib). For hepatocellular carcinoma, patient has unresectable disease and Nexavar will be used as a single agent. For osteosarcoma, Nexavar will be used as a single agent. For GIST, disease progressed after failure of imatinib, sunitinib, or regorafenib. For follicular, Hurthle cell, and papillary thyroid carcinoma, the disease is unresectable or metastatic. The disease is radio-iodine refractory. The disease is progressive or symptomatic. For medullary thyroid carcinoma, after progression on vandetanib or cabozantinib OR vandetanib or cabozantinib are not appropriate options.

NINLARO

**Drug Names**

NINLARO

**Covered Uses**

All FDA-approved indications not otherwise excluded from Part D.

**Exclusion Criteria**

**Required Medical Information**

Patient has a diagnosis of severe asthma with an eosinophilic phenotype. Nucala is used in combination with other medications for the maintenance treatment of asthma. Patient has a rapid acting beta2-agonist available for rescue therapy. For initial therapy only: 1) Patient has baseline eosinophil count of at least 150 cells per microliter, and 2) Patient has a history of severe asthma attacks (exacerbations) despite current treatment with both of the following medications at optimized doses: a) inhaled corticosteroid AND b) additional controller (long acting beta2-agonist, leukotriene modifier, or sustained-release theophylline). For continuation therapy only: Asthma control has improved on Nucala treatment, demonstrated by a reduction in the frequency and/or severity of symptoms and exacerbations.

| Prior Authorization Group   | ORAL-INTRANASAL FENTANYL |
**Drug Names**
ABSTRAL, FENTANYL CITRATE ORAL TRA, FENTORA, LAZANDA, SUBSYS

**Covered Uses**
All FDA-approved indications not otherwise excluded from Part D.

**Exclusion Criteria**
Significant respiratory depression. Known or suspected paralytic ileus.

**Required Medical Information**
1) The drug is being prescribed for the management of breakthrough pain in a cancer patient who is already receiving around-the-clock opioid therapy for underlying cancer pain AND 2) The patient can safely take the requested dose based on their current opioid use history. [Note: The TIRF (Transmucosal Immediate-Release Fentanyl) products (Abstral, Actiq, Fentora, Lazanda, and Subsys) are indicated for opioid-tolerant patients. Patients considered opioid tolerant are those who are taking at least: 60 mg of oral morphine/day, 25 mcg of transdermal fentanyl/hour, 30 mg oral oxycodone/day, 8 mg oral hydromorphone/day, 25 mg oral oxymorphone/day, or an equianalgesic dose of another opioid for a week or longer.]

**Age Restrictions**

**Coverage Duration**
Plan Year

**Other Criteria**

**Prior Authorization Group**
ORENCIA

**Drug Names**
ORENCIA, ORENCIA CLICKJECT

**Covered Uses**
All FDA-approved indications not otherwise excluded from Part D.

**Exclusion Criteria**
Latent TB screening with either a TB skin test or an interferon gamma release assay (e.g., QFT-GIT, T-SPOT.TB) prior to initiating Orencia (or other biologic). For moderately to severely active rheumatoid arthritis (new starts only): 1) Inadequate response to at least a 3-month trial of methotrexate (MTX) OR 2) Intolerance or contraindication to MTX OR 3) Inadequate response to at least a 3-month trial of biologic DMARD or Xeljanz OR 4) Intolerance to a prior biologic DMARD or Xeljanz. For active polyarticular juvenile idiopathic arthritis (new starts only): 1) Inadequate response to at least a 3-month trial of a TNF inhibitor (eg, Humira), OR 2) Intolerance or contraindication to a TNF inhibitor (eg, Humira).

**Age Restrictions**

**Prescriber Restrictions**

**Coverage Duration**
Plan Year

**Other Criteria**
Orencia will not be used in combination with a TNF inhibitor.

**Prior Authorization Group**
ORENITRAM

**Drug Names**
ORENITRAM

**Covered Uses**
All FDA-approved indications not otherwise excluded from Part D.

**Exclusion Criteria**
Severe hepatic impairment (Child Pugh Class C).
**Required Medical Information**

NYHA Functional Class II or III symptoms. PAH (WHO Group 1) was confirmed by right heart catheterization. For new starts only: 1) pretreatment mean pulmonary arterial pressure is greater than or equal to 25 mmHg, 2) pretreatment pulmonary capillary wedge pressure is less than or equal to 15 mmHg, and 3) pretreatment pulmonary vascular resistance is greater than 3 Wood units.

**Age Restrictions**

**Prescriber Restrictions**

**Prior Authorization Group**

**Drug Names**

**Covered Uses**

All FDA-approved indications not otherwise excluded from Part D.

**Exclusion Criteria**

**Required Medical Information**

For active psoriatic arthritis, patient has had an inadequate response, contraindication, or intolerance to at least two disease-modifying antirheumatic drugs (DMARDs). For moderate to severe plaque psoriasis: 1) At least 5% of body surface area (BSA) is affected or crucial body areas (eg, feet, hands, face, neck and/or groin) are affected, AND 2) Inadequate response to either phototherapy (eg, UVB, PUVA) or a traditional systemic agent (eg, methotrexate, cyclosporine, acitretin), unless contraindicated or intolerant to such therapies.
Age Restrictions
Prescriber Restrictions
Coverage Duration
Other Criteria

Prior Authorization Group
PEGASYS

Drug Names
PEGASYS, PEGASYS PROCLICK

Covered Uses
All FDA-approved indications not otherwise excluded from Part D, chronic myelogenous leukemia (CML), giant cell tumor of the bone (GCTB).

Exclusion Criteria
Decompensated cirrhosis (Child Turcotte Pugh class B or C)

Required Medical Information
For chronic hepatitis C (CHC): CHC infection confirmed by presence of HCV RNA in serum prior to starting treatment (tx). For monotherapy OR dual therapy with ribavirin (RBV): total 48 weeks (wks). For tx with Olysio and RBV: total 48 wks. For tx with Sovaldi and RBV: total 12 wks. For chronic hepatitis B: 1) For pt with cirrhosis, must have been HBsAg positive for at least 6 months AND must have serum HBV-DNA greater than or equal to 10,000 copies/mL or greater than or equal to 2,000 IU/mL regardless of HBeAg status. 2) For pts without cirrhosis, must have been HBsAg positive for at least 6 months. If HBeAg positive, pt must have serum HBV-DNA greater than 100,000 copies/mL or greater than 20,000 IU/mL. If HBeAg negative, pt must have serum HBV-DNA greater than 10,000 copies/mL or greater than 2,000 IU/mL. Must have persistent or intermittently elevated ALT greater than 2 times the upper limit of normal OR liver biopsy showing chronic hepatitis with moderate to severe inflammation or significant fibrosis.

Age Restrictions
Prescriber Restrictions
Coverage Duration
HCV=12 to 48 wks depending on treatment regimen. HBV=48 wks. CML and GCTB = Plan Year.

Other Criteria

Prior Authorization Group
PEGINTRON

Drug Names
PEG-INTRON REDIPEN, PEGINTRON

Covered Uses
All FDA-approved indications not otherwise excluded from Part D, chronic myelogenous leukemia (CML).

Exclusion Criteria
Decompensated liver disease (eg, Child Turcotte Pugh class B or C)
Required Medical Information

For chronic hepatitis C (CHC): CHC infection confirmed by presence of HCV RNA in serum prior to starting treatment (tx). For monotherapy OR dual therapy with ribavirin (RBV): total 48 weeks (wks). For tx with Olysio and RBV (G1 only): 1) total 24 wks for patients (pts) without history of nonresponse to prior therapy with PEG-IFN and RBV, 2) total 48 wks for pts with nonresponse to prior HCV therapy with PEG-IFN and RBV and HCV-RNA less than 25 IU/mL at wk 24. For tx with Sovaldi and RBV: 1)Total 12 wks for G2 infection in pts who failed prior tx with PEG-IFN and RBV or prior tx with sofosbuvir and ribavirin, 2)Total 12 wks for G3,4,5,6 infection and tx-naive or failed prior tx with PEG-IFN and RBV, 3)Total 12 wks for G3 infection in pts who failed prior tx with sofosbuvir and RBV, 4)HCV/HIV coinfection: a) Pt meets criteria for requested regimen above, and b) Will not receive tx with tipranavir.

Age Restrictions

**Required Medical Information**

Member must have one of the following conditions (new starts and continuation): 1) Prior clinical atherosclerotic cardiovascular disease (ASCVD) or cardiovascular event (see Other Criteria), or 2) Heterozygous familial hypercholesterolemia (HeFH): Definite diagnosis of FH (See Other Criteria). For new starts: For members with prior clinical ASCVD or cardiovascular event, at least one of the following requirements is met: 1) Current LDL-C level 70 mg/dL or greater after treatment with a high-intensity statin (eg, atorvastatin, rosuvastatin), 2) Current LDL-C level 70 mg/dL or greater with intolerance to a high-intensity statin AND is taking a maximally tolerated dose of any statin, 3) Current LDL-C level 70 mg/dL or greater with contraindication to statin (see Other Criteria) OR intolerance to any dose of two statins, or 4) Recent treatment (ie, within the last 120 days) with another PCSK9 inhibitor. For members with HeFH, at least one of the following requirements is met: 1) With ASCVD: See requirements for members with prior ASCVD above, 2) Current LDL-C level 100 mg/dL or greater after treatment with a high-intensity statin (eg, atorvastatin, rosuvastatin), 3) Current LDL-C level 100 mg/dL or greater with intolerance to a high-intensity statin AND is taking a maximally tolerated dose of any statin, 4) Current LDL-C level 100 mg/dL or greater with contraindication to statin (see Other Criteria) OR intolerance to any dose of two statins, or 5) Recent treatment (ie, within the last 120 days) with another PCSK9 inhibitor. For continuation: Response to therapy as demonstrated by a reduction in LDL-C.

**Age Restrictions**

18 years of age or older

**Prescriber Restrictions**

**Coverage Duration**

Plan Year

**Other Criteria**

Clinical ASCVD or cardiovascular event defined as acute coronary syndromes, myocardial infarction, stable or unstable angina, coronary or other arterial revascularization procedure [eg, PTCA, CABG], stroke of presumed atherosclerotic origin, transient ischemic attack, peripheral arterial disease of presumed atherosclerotic origin, findings from CT angiogram or catheterization consistent with clinical ASCVD). Diagnosis of FH must be confirmed by one of the following: 1) Genetic confirmation: An LDL-receptor mutation, familial defective apo B-100, or a PCSK9 gain-of-function mutation, 2) Simon-Broome Diagnostic Criteria for definite FH: Total cholesterol greater than 290 mg/dL or LDL-C greater than 190 mg/dL, plus tendon xanthoma in patient, first-degree (parent, sibling or child) or second-degree relative (grandparent, uncle or aunt), or 3) Dutch Lipid Clinic Network Criteria for definite FH: Total score greater than 8 points. Contraindication to statin must be due to one of the following: 1) Active liver disease, including unexplained persistent elevations in hepatic transaminase levels (eg, ALT level at least 3 times ULN), 2) Women who are pregnant or may become pregnant, or 3) Nursing mothers.

**Prior Authorization Group**

**Drug Names**

PRIVIGEN

Updated 11/01/2016
**Covered Uses**

All FDA-approved indications not otherwise excluded from Part D, chronic inflammatory demyelinating polyneuropathy, multifocal motor neuropathy, dermatomyositis, polymyositis, Guillain-Barre syndrome (GBS), relapsing-remitting multiple sclerosis (RRMS), myasthenia gravis, Lambert-Eaton myasthenic syndrome, Kawasaki syndrome, pure red cell aplasia (PRCA), fetal/neonatal alloimmune thrombocytopenia, and prophylaxis of bacterial infections in B-cell chronic lymphocytic leukemia (CLL), bone marrow/hematopoietic stem cell transplant (BMT/HSCT) recipients, and pediatric HIV infection.

**Exclusion Criteria**

IgA deficiency with antibodies to IgA and a history of hypersensitivity. History of anaphylaxis or severe systemic reaction to human immune globulin or product components. Hyperprolinemia.

**Required Medical Information**

For dermatomyositis and polymyositis: standard 1st line treatments (corticosteroids or immunosuppressants) have been tried but were unsuccessful or not tolerated OR patient is unable to receive standard therapy because of a contraindication or other clinical reason. For GBS: physical mobility must be severely affected such that the patient requires an aid to walk AND IVIG therapy must be initiated within 2 weeks of symptom onset. For RRMS: standard 1st line treatments (interferon or glatiramer) have been tried but were unsuccessful or not tolerated OR patient is unable to receive standard therapy because of a contraindication or other clinical reason. For CLL: serum IgG less than 500 mg/dL OR a history of recurrent bacterial infections. For BMT/HSCT: serum IgG less than 400 mg/dL. For pediatric HIV infection: serum IgG less than 400 mg/dL OR a history of recurrent bacterial infections. PRCA is secondary to parvovirus B19 infection. For all indications: patients with any of the following risk factors for renal dysfunction must receive the minimum dose or concentration available of IVIG and the minimum infusion rate practicable: pre-existing renal insufficiency, diabetes mellitus, age over 65 years, volume depletion, sepsis, paraproteinemia, or receiving concomitant nephrotoxic drugs. For all indications: patients with any of the following risk factors for thrombosis must receive the minimum dose or concentration available of IVIG and the minimum infusion rate practicable: age 45 years or older, prolonged immobilization, hypercoagulable conditions, history of venous or arterial thrombosis, use of estrogens, indwelling central vascular catheters, hyperviscosity, or cardiovascular risk factors.

**Age Restrictions**

For pediatric HIV infection: age 12 years or younger

**Prescriber Restrictions**

Plan Year

**Coverage Duration**

Coverage under Part D will be denied if coverage is available under Part A or Part B as the medication is prescribed and dispensed or administered for the individual.

**Prior Authorization Group**

PROCYSBI

**Drug Names**

PROCYSBI

**Covered Uses**

All FDA-approved indications not otherwise excluded from Part D.

Updated 11/01/2016
Exclusion Criteria

Required Medical Information
Diagnosis of nephropathic cystinosis was confirmed by the presence of increased cysteine concentration in leukocytes or by DNA testing. Patient has tried and experienced intolerance to prior Cystagon therapy.

Age Restrictions

Prescriber Restrictions

Coverage Duration
Plan Year

Other Criteria

Prior Authorization Group
PROMACTA

Drug Names
PROMACTA

Covered Uses
All FDA-approved indications not otherwise excluded from Part D.

Exclusion Criteria

Required Medical Information
For chronic or persistent immune thrombocytopenia (ITP):
1) For new starts: a) Patient has had an inadequate response or is intolerant to corticosteroids, immunoglobulins or splenectomy, AND b) Untransfused platelet count at time of diagnosis is less than 30,000/mcL OR 30,000-50,000/mcL with symptomatic bleeding or risk factor(s) for bleeding. 2) For continuation of therapy, platelet (plt) count response to Promacta: a) Current plt count is 50,000-200,000/mcL OR b) Current plt count is less than 50,000/mcL and sufficient to avoid clinically important bleeding OR c) Current plt count is less than 50,000/mcL and patient has not received a maximal dose of Promacta for at least 4 weeks OR d) Current plt count is greater than 200,000/mcL and dosing will be adjusted to a plt count sufficient to avoid clinically important bleeding.

For thrombocytopenia associated with chronic hepatitis C:
1) For new starts: a) Promacta is used for initiation and maintenance of interferon-based therapy, AND b) Untransfused platelet count at time of diagnosis is less than 75,000/mcL. 2) For continuation of therapy: patient is receiving interferon-based therapy.

For severe aplastic anemia (AA):
1) For new starts: a) Patient has had an inadequate response to immunosuppressive therapy, AND b) Untransfused platelet count at time of diagnosis is less than or equal to 30,000/mcL. 2) For continuation of therapy, plt count response to Promacta: a) Current plt count is 50,000-200,000/mcL OR b) Current plt count is less than 50,000/mcL and patient has not received appropriately titrated therapy for at least 16 weeks OR c) Current plt count is greater than 200,000/mcL and dosing will be adjusted to achieve and maintain an appropriate target plt count. Adequate platelet response = APR. Inadequate platelet response = IPR.

Coverage Duration
HCV:6mo, ITP/AA initial:6mo, ITP/AA APR reauth: Plan Yr, ITP IPR reauth:3mo, AA IPR reauth:16wks

Other Criteria
Prior Authorization Group: QUININE SULFATE

Drug Names: QUININE SULFATE

Covered Uses: All FDA-approved indications not otherwise excluded from Part D, Babesiosis.

Required Medical Information:

Age Restrictions: 1 month

Prescriber Restrictions:

Coverage Duration: 1 month

Other Criteria:

Prior Authorization Group: RAGWITEK

Drug Names: RAGWITEK

Covered Uses: All FDA-approved indications not otherwise excluded from Part D.

Exclusion Criteria: Severe, unstable, or uncontrolled asthma. History of any severe systemic allergic reaction or any severe local reaction to sublingual allergen immunotherapy. A history of eosinophilic esophagitis. Medical conditions that may reduce the ability of the patient to survive a serious allergic reaction or increase the risk of adverse reactions after epinephrine administration. Patient is on any medication(s) that can inhibit or potentiate the effect of epinephrine.

Required Medical Information:

Age Restrictions: 18 through 65 years of age

Prescriber Restrictions: Allergist or in consultation with an allergist

Coverage Duration: 6 months

Other Criteria:

1) Auto-injectable epinephrine will be prescribed or available to the patient and the patient will be instructed and trained on its use AND 2) Treatment is initiated at least 12 weeks prior to expected onset of the ragweed pollen season AND 3) For a patient currently receiving Ragwitek, patient must show benefit from Ragwitek treatment (i.e., reduction in symptoms of allergic rhinitis and conjunctivitis, decreased use of rescue medications such as antihistamines and nasal or oral corticosteroids).

Prior Authorization Group: RAVICTI

Drug Names: RAVICTI

Covered Uses: All FDA-approved indications not otherwise excluded from Part D.

Exclusion Criteria: Diagnoses of urea cycle disorder (UCD) was confirmed by enzymatic, biochemical or genetic testing. Ravicti will be used for chronic management of UCD. UCD cannot be managed by dietary protein restriction and/or amino acid supplementation alone. Ravicti will be used in combination with dietary protein restriction. Patient has experienced intolerance to prior Buphenyl therapy OR patient has not tried Buphenyl because of a comorbid condition that prohibits a trial due to its sodium content (e.g., heart failure, hypertension, renal impairment, edema).

REVLIMID

All FDA-approved indications not otherwise excluded from Part D, systemic light chain amyloidosis, chronic lymphocytic leukemia/small lymphocytic lymphoma, classical Hodgkin lymphoma, mantle cell lymphoma, non-Hodgkin's lymphoma with the following subtypes: AIDS-related diffuse large B-cell lymphoma, primary effusion lymphoma, lymphoma associated with Castleman's disease, diffuse large B-cell lymphoma, follicular lymphoma, nongastric/gastric MALT lymphoma, primary cutaneous B-cell lymphoma, splenic marginal zone lymphoma

Exclusion Criteria
Required Medical Information

For multiple myeloma: Revlimid (REV) will be used as primary, maintenance, or salvage therapy. If primary and the patient is a stem cell transplant (SCT) candidate, REV will be used with dexamethasone (dex), dex and bortezomib, or dex and carfilzomib. If primary and the patient is not a SCT candidate, REV will be used with dex OR melphalan and prednisone. If maintenance, REV will be used as monotherapy. If salvage and the patient will be retreated with the same regimen and they were a SCT candidate, REV will be used in combination with dex, dex and bortezomib, or dex and carfilzomib. If salvage and the patient will be retreated with the same regimen and they were not a SCT candidate, REV will be used in combination with dex OR melphalan and prednisone. If salvage and the patient will not be retreated with the same regimen, REV will be used as monotherapy or in combination with dex, dex and bortezomib, dex and cyclophosphamide, or dex and bendamustine. For myelodysplastic syndrome: patients must have low- to intermediate-1 risk MDS. If the patient has the 5q deletion, no further questions. If they do not, no further questions are required if their serum erythropoietin (EPO) level is greater than 500 mU/ml. If they do not have the deletion and their serum EPO level is less than 500 mU/ml, the patient must have failed epoetin or darbepoetin AND failed, had intolerance to, or a contraindication to immunosuppressive therapy. For mantle cell lymphoma: the disease is relapsed, refractory, or progressive. For systemic light chain amyloidosis: REV will be used with either dex or dex AND cyclophosphamide. Chronic lymphocytic leukemia/small lymphocytic lymphoma: the disease is relapsed or refractory. For Hodgkin lymphoma: REV will be used as a single agent as third line or salvage therapy. For non-Hodgkin lymphoma: the disease is relapsed, refractory, or progressive. REV will be used as monotherapy or in combination with rituximab.

RITUXAN
Covered Uses

All FDA-approved indications not otherwise excluded from Part D, primary CNS lymphoma, leptomeningeal metastases from lymphomas, Hodgkin's lymphoma (lymphocyte-predominant), non-Hodgkin's lymphoma subtypes [marginal zone lymphomas (splenic, MALT), Mantle cell lymphoma, Burkitt lymphoma, AIDS-related B-cell lymphoma, relapsed/refractory hairy cell leukemia, small lymphocytic lymphoma (SLL), post-transplant lymphoproliferative disorder (PTLD), primary cutaneous B-cell lymphoma], acute lymphoblastic leukemia, acquired blood factor VIII deficiency, autoimmune hemolytic anemia, chronic graft-versus-host disease (GVHD), multicentric Castleman's disease with HIV, refractory immune or idiopathic thrombocytopenic purpura (ITP), Waldenstrom's macroglobulinemia/lymphoplasmacytic lymphoma, Sjogren syndrome, thrombotic thrombocytopenic purpura, and prevention of Epstein-Barr virus (EBV)-related PTLD.

Exclusion Criteria

Prior to initiating therapy, patient has been screened for hepatitis B virus (HBV) infection with Hepatitis B serologic assays. For moderately to severely active rheumatoid arthritis (new starts only): Inadequate response to a self-injectable tumor necrosis factor (TNF) inhibitor OR Intolerance or contraindication to a self-injectable TNF inhibitor. Hematologic malignancies must be CD20-positive. For Burkitt lymphoma and ALL, Rituxan is used as a component of a chemotherapy regimen. For diffuse large B-cell lymphoma (DLBCL), patient meets one of the following: 1) has relapsed or refractory disease and will use Rituxan as a component of a chemotherapy regimen if patient is a candidate for high dose therapy with autologous stem cell rescue 2) has relapsed or refractory disease and is not a candidate for high dose therapy with autologous stem cell rescue OR 3) does not have relapsed or refractory disease and will use Rituxan as a component of a chemotherapy regimen. For Wegener's Granulomatosis (WG) and Microscopic Polyangiitis (MPA), Rituxan will be used in combination with glucocorticoids.

Required Medical Information

Diagnosis of HAE confirmed by laboratory tests (eg, C4, C1 inhibitor functional, and C1 inhibitor antigenic protein levels)

**Prior Authorization Group**
- SILDENAFIL

**Drug Names**
- REVATIO, SILDENAFIL

**Covered Uses**
- All FDA-approved indications not otherwise excluded from Part D.

**Exclusion Criteria**
- Patient requires nitrate therapy on a regular or intermittent basis.

**Required Medical Information**
- NYHA Functional Class II or III symptoms. PAH (WHO Group 1) was confirmed by right heart catheterization. For new starts only: 1) pretreatment mean pulmonary arterial pressure is greater than or equal to 25 mmHg, 2) pretreatment pulmonary capillary wedge pressure is less than or equal to 15 mmHg, and 3) pretreatment pulmonary vascular resistance is greater than 3 Wood units.

---

**Prior Authorization Group**
- SIMPONI

**Drug Names**
- SIMPONI, SIMPONI ARIA

**Covered Uses**
- All FDA-approved indications not otherwise excluded from Part D, Axial spondyloarthritis (Simponi only).
Required Medical Information

Latent TB screening with either a TB skin test or an interferon gamma release assay (eg, QFT-GIT, T-SPOT.TB) prior to initiating Simponi/Simponi Aria (or other biologic). For moderately to severely active rheumatoid arthritis (new starts only): 1) Simponi/Simponi Aria is prescribed in combination with methotrexate (MTX) or MTX is contraindicated or was not tolerated AND 2) Member must meet ANY of the following requirements: a) Inadequate response to at least a 3-month trial of methotrexate despite adequate dosing (ie, titrated to 25-30 mg/week), b) intolerance or contraindication to MTX, c) inadequate response to at least a 3-month trial of a prior biologic DMARD or a targeted synthetic DMARD (e.g. Xeljanz), d) intolerance to a prior biologic DMARD or a targeted synthetic DMARD, OR e) severely active RA. For active psoriatic arthritis (PsA) (new starts only): Member must meet at least one of the following requirements: 1) Inadequate response to at least a 3-month trial of MTX, leflunomide or sulfasalazine, 2) intolerance or contraindication to MTX, leflunomide or sulfasalazine, 3) inadequate response to at least a 3-month trial of a prior biologic DMARD, 4) intolerance to a prior biologic DMARD, 5) severely active PsA as evidenced by ANY of the following: a) multiple swollen joints, b) structural damage in the presence of inflammation, or c) clinically relevant extra-articular manifestations (eg, extensive skin, bowel, ocular, cardiovascular, urogenital, or pulmonary involvement), 6) active enthesitis and/or dactylitis (ie, sausage finger), or 7) predominant axial disease (ie, extensive spinal involvement).

Age Restrictions
Prescriber Restrictions
Coverage Duration
Other Criteria

Plan Year
For active ankylosing spondylitis and axial spondyloarthritis (new starts only): 1) Member has an inadequate response to at least a 4-week NSAID trial at maximum recommended or tolerated dose OR intolerance and/or contraindication to NSAIDs AND 2) Member has at least ONE of the following: a) predominant axial disease (ie, extensive spinal involvement), b) inadequate response to synthetic DMARD (eg, sulfasalazine), c) intolerance or contraindication to synthetic DMARD, d) inadequate response to at least a 3-month trial of a prior biologic DMARD, or e) intolerance to a prior biologic DMARD. For moderately to severely active ulcerative colitis (new starts only): Member has at least one of the following: 1) Corticosteroid dependence, 2) inadequate response to a conventional therapy (eg, oral aminosalicylates, oral corticosteroids, azathioprine, or 6-mercaptopurine), or 3) intolerance or a contraindication to conventional therapy.

Prior Authorization Group
Drug Names
Covered Uses

SIRTURO
SIRTURO
All FDA-approved indications not otherwise excluded from Part D.

Updated 11/01/2016
### Exclusion Criteria
- Sirturo being prescribed for the treatment of latent infection due to Mycobacterium tuberculosis, drug-sensitive tuberculosis, extra-pulmonary tuberculosis (e.g. central nervous system), or infection caused by the non-tuberculous mycobacteria (NTM).

### Required Medical Information
- Another effective treatment regimen cannot be used instead of Sirturo.

### Prior Authorization Group
- SOMATULINE DEPOT

### Drug Names
- SOMATULINE DEPOT

### Covered Uses
- All FDA-approved indications not otherwise excluded from Part D, poorly differentiated (high-grade) neuroendocrine tumors (NET)/large or small cell, pancreatic endocrine tumors (Islet cell tumors), carcinoid tumors.

### Exclusion Criteria
For Acromegaly, must meet all of the following: 1) Clinical evidence of acromegaly, AND 2) Pre-treatment high IGF-1 level for age/gender, AND 3) Patient had an inadequate or partial response to surgery and/or radiotherapy OR there is a clinical reason for why the patient has not had surgery or radiotherapy

### Required Medical Information
For Acromegaly, must meet all of the following: 1) Clinical evidence of acromegaly, AND 2) Pre-treatment high IGF-1 level for age/gender, AND 3) Patient had an inadequate or partial response to surgery and/or radiotherapy OR there is a clinical reason for why the patient has not had surgery or radiotherapy

### Age Restrictions
- Plan Year

### Prescriber Restrictions
- For acromegaly continuation of therapy: the IGF-1 level decreased or normalized.

### Prior Authorization Group
- SOMAVERT

### Drug Names
- SOMAVERT

### Covered Uses
- All FDA-approved indications not otherwise excluded from Part D.

### Exclusion Criteria
Patient must meet all of the following: 1) Clinical evidence of acromegaly, AND 2) Pre-treatment high IGF-1 level for age/gender, AND 3) Patient had an inadequate or partial response to surgery and/or radiotherapy OR there is a clinical reason for why the patient has not had surgery or radiotherapy, AND 4) Patient had an inadequate response to octreotide or lanreotide OR patient is intolerant or has a contraindication to octreotide or lanreotide

### Required Medical Information
Patient must meet all of the following: 1) Clinical evidence of acromegaly, AND 2) Pre-treatment high IGF-1 level for age/gender, AND 3) Patient had an inadequate or partial response to surgery and/or radiotherapy OR there is a clinical reason for why the patient has not had surgery or radiotherapy, AND 4) Patient had an inadequate response to octreotide or lanreotide OR patient is intolerant or has a contraindication to octreotide or lanreotide

### Age Restrictions
- Plan Year

### Prescriber Restrictions
- For renewal, the IGF-1 level decreased or normalized

### Prior Authorization Group
- SOVALDI

### Drug Names
- SOVALDI

---

Updated 11/01/2016
Covered Uses

All FDA-approved indications not otherwise excluded from Part D, chronic hepatitis C genotype 5 or 6 infection.

Exclusion Criteria

Chronic hepatitis C infection confirmed by presence of HCV RNA in serum prior to treatment. Planned treatment regimen, genotype, prior treatment history, presence or absence of cirrhosis (compensated or decompensated [Child Turcotte Pugh class B or C]), presence or absence of HIV coinfection, presence or absence of resistance-associated variants (e.g., NS3 Q80K polymorphism) where applicable, liver transplantation status if applicable. For patients with genotype 1, 2, 3, or 4 infection and hepatocellular carcinoma awaiting liver transplantation: must meet MILAN criteria. Coverage conditions and specific durations of approval will be based on current AASLD treatment guidelines.

Required Medical Information

Chronic hepatitis C infection confirmed by presence of HCV RNA in serum prior to treatment. Planned treatment regimen, genotype, prior treatment history, presence or absence of cirrhosis (compensated or decompensated [Child Turcotte Pugh class B or C]), presence or absence of HIV coinfection, presence or absence of resistance-associated variants (e.g., NS3 Q80K polymorphism) where applicable, liver transplantation status if applicable. For patients with genotype 1, 2, 3, or 4 infection and hepatocellular carcinoma awaiting liver transplantation: must meet MILAN criteria. Coverage conditions and specific durations of approval will be based on current AASLD treatment guidelines.

Age Restrictions

12 to 48 weeks depending on baseline host and viral factors

Prescriber Restrictions

For HCV/HIV coinfection, patient meets criteria for requested regimen and will not receive treatment with tipranavir. For patients prescribed a treatment regimen that includes Olysio, no prior treatment failure with an HCV protease inhibitor (e.g., telaprevir, simeprevir, boceprevir, paritaprevir) despite adequate dosing and duration of therapy. MILAN criteria defined as: 1) tumor size 5 cm or less in diameter in pts with single hepatocellular carcinoma OR 3 tumor nodules or less, each 3 cm or less in diameter in pts with multiple tumors, and 2) no extrahepatic manifestations of the cancer or evidence of vascular invasion of tumor.

Coverage Duration

Plan Year

Other Criteria

Prior Authorization Group

SPRYCEL

Drug Names

SPRYCEL

Covered Uses

All FDA-approved indications not otherwise excluded from Part D, gastrointestinal stromal tumor (GIST).

Exclusion Criteria

Diagnosis of CML or Ph+ ALL was confirmed by detection of the Philadelphia chromosome or BCR-ABL gene. For CML, patient has experienced resistance, intolerance or toxicity to imatinib or an alternative tyrosine kinase inhibitor (e.g., nilotinib). For GIST, patient must have PDGFRα D842V mutation.

Required Medical Information

Diagnosis of CML or Ph+ ALL was confirmed by detection of the Philadelphia chromosome or BCR-ABL gene. For CML, patient has experienced resistance, intolerance or toxicity to imatinib or an alternative tyrosine kinase inhibitor (e.g., nilotinib). For GIST, patient must have PDGFRα D842V mutation.

Age Restrictions

For Ph+ ALL: 15 years of age or older. Other indications: 18 years of age or older

STIVARGA

Drug Names

STIVARGA

Covered Uses

All FDA-approved indications not otherwise excluded from Part D.

Exclusion Criteria

Required Medical Information

For unresectable advanced or metastatic colorectal cancer, KRAS (with or without NRAS) mutation testing is performed on either the primary tumor or metastases to confirm RAS mutation status. The patient must have been previously treated with fluoropyrimidine-, oxaliplatin- and irinotecan-based chemotherapy, and, if KRAS or NRAS wild type, an anti-EGFR therapy. Stivarga must be used as a single agent. For locally advanced, unresectable or metastatic gastrointestinal stromal tumor (GIST), the patient must have been previously treated with imatinib or sunitinib.

Age Restrictions

SUTENT

Drug Names

SUTENT

Updated 11/01/2016
### Covered Uses

All FDA-approved indications not otherwise excluded from Part D, thyroid carcinoma (follicular, papillary, Hurthle cell, or medullary), angiosarcoma, solitary fibrous tumor, hemangiopericytoma, alveolar soft part sarcoma, chordoma (bone cancer), lung neuroendocrine tumor.

### Exclusion Criteria

**Required Medical Information**

For renal cell carcinoma, disease is relapsed or medically unresectable and Sutent will be used as a single agent. For PNET, disease is unresectable, locally advanced, or metastatic. For GIST, patient experienced disease progression on imatinib or was intolerant to imatinib. For chordoma: disease is recurrent. For follicular, papillary, or Hurthle cell thyroid carcinoma: Nexavar is not an appropriate option for the patient. The disease is unresectable or metastatic. The disease is radioiodine-refractory. The disease is progressive or symptomatic. For medullary thyroid carcinoma: patient experienced progression on vandetanib or cabozantinib OR vandetanib or cabozantinib are not appropriate options.

### Age Restrictions

### Prescriber Restrictions

### Coverage Duration

Plan Year

### Other Criteria

#### Prior Authorization Group
SYLATRON

#### Drug Names
SYLATRON

#### Covered Uses
All FDA-approved indications not otherwise excluded from Part D, giant cell tumor of the bone.

### Exclusion Criteria

**Required Medical Information**

For giant cell tumor of the bone, patient has unresectable disease OR surgical resection is likely to result in severe morbidity.

### Age Restrictions

### Prescriber Restrictions

### Coverage Duration

Plan Year

### Other Criteria

For melanoma, Sylatron must be requested within 84 days (12 weeks) of the surgical resection.

### Prior Authorization Group
SYMLIN

### Drug Names
SYMLINPEN 120, SYMLINPEN 60

### Covered Uses
All FDA-approved indications not otherwise excluded from Part D.

### Exclusion Criteria

Recurrence severe hypoglycemia that required assistance during the past 6 months.

Gastroparesis. Patient requires drug therapy to stimulate gastrointestinal motility.

Hypoglycemia unawareness (i.e., inability to detect and act upon the signs or symptoms of hypoglycemia). HbA1c level greater than 9 percent.
### Required Medical Information

1) Diagnosis of type 1 or type 2 diabetes mellitus AND 2) The patient has demonstrated an inadequate treatment response, contraindication or been intolerant to metformin OR a sulfonylurea OR a thiazolidinedione OR insulin AND 3) The patient is currently receiving optimal mealtime insulin therapy

### Age Restrictions

**Prescriber Restrictions**

**Coverage Duration**

**Other Criteria**

Plan Year

If the patient has been receiving the Symlin for at least 3 months, patient demonstrated a reduction in HbA1c since starting Symlin therapy

### Prior Authorization Group

**SYNRIBO**

### Drug Names

**SYNRIBO**

### Covered Uses

All FDA-approved indications not otherwise excluded from Part D.

### Exclusion Criteria

For CML, the patient has experienced resistance, toxicity or intolerance to prior therapy with at least two tyrosine kinase inhibitors (TKIs) (eg, imatinib, dasatinib, nilotinib, bosutinib, ponatinib).

### Required Medical Information

**For CML, the patient has experienced resistance, toxicity or intolerance to prior therapy with at least two tyrosine kinase inhibitors (TKIs) (eg, imatinib, dasatinib, nilotinib, bosutinib, ponatinib).**

### Age Restrictions

**Prescriber Restrictions**

**Coverage Duration**

**Other Criteria**

Plan Year

### Prior Authorization Group

**TAFINLAR**

### Drug Names

**TAFINLAR**

### Covered Uses

All FDA-approved indications not otherwise excluded from Part D, CNS metastases, NSCLC.

### Exclusion Criteria

For monotherapy in melanoma, patient must have a diagnosis of unresectable or metastatic melanoma AND the tumor must be positive for BRAF V600E mutation. For combination with Mekinist in melanoma, patient must have a diagnosis of unresectable or metastatic melanoma AND the tumor must be positive for either BRAF V600E or V600K mutation. For CNS metastases, the patient has a diagnosis of melanoma AND Tafinlar was active against primary tumor (melanoma) AND Tafinlar will be used as a single agent. For non-small cell lung cancer (NSCLC), the patient has BRAF V600E mutation.

### Required Medical Information

**For monotherapy in melanoma, patient must have a diagnosis of unresectable or metastatic melanoma AND the tumor must be positive for BRAF V600E mutation. For combination with Mekinist in melanoma, patient must have a diagnosis of unresectable or metastatic melanoma AND the tumor must be positive for either BRAF V600E or V600K mutation. For CNS metastases, the patient has a diagnosis of melanoma AND Tafinlar was active against primary tumor (melanoma) AND Tafinlar will be used as a single agent. TARCEVA

**Drug Names**

TARCEVA

**Covered Uses**

All FDA-approved indications not otherwise excluded from Part D, chordoma, renal cell carcinoma.

**Exclusion Criteria**

For non-small cell lung cancer, Tarceva is used for locally advanced, recurrent, or metastatic disease. EGFR mutation testing was performed and is positive for EGFR exon 19 deletion or exon 21 (L858R) substitution mutation, Tarceva is used as either a first-line or second-line therapy. For first-line therapy, Tarceva is used as a single agent for the disease with locoregional recurrence with evidence of disseminated disease or with distant metastases. For second-line therapy, Tarceva is used following disease progression on erlotinib or afatinib, Tarceva is continued to be used as a single agent or used in combination with platinum-doublet therapy with or without bevacizumab. For EGFR mutation negative or unknown, Tarceva is used for the disease which progressed after chemotherapy as a second-line or third-line therapy. For pancreatic cancer, Tarceva is used in combination with gemcitabine for patients with locally advanced unresectable or metastatic disease. For chordoma, Tarceva is used as a single agent for the treatment of recurrent disease. For RCC, Tarceva is used as a single agent for patients with relapsed or medically unresectable stage IV disease with non-clear cell histology.

**Age Restrictions**

**Prescriber Restrictions**

TARGRETIN

**Drug Names**

BEXAROTENE, TARGRETIN
**Covered Uses**

All FDA-approved indications not otherwise excluded from Part D, mycosis fungoides, Sezary syndrome (capsules only), primary cutaneous CD30-positive T-cell lymphoproliferative disorder types: primary cutaneous anaplastic large cell lymphoma (capsules only) and lymphomatoid papulosis (capsules only), adult T-cell leukemia/lymphoma (gel only), primary cutaneous B-cell lymphoma types: primary cutaneous marginal zone lymphoma (gel only) and primary cutaneous follicle center lymphoma (gel only).

**Exclusion Criteria**

**Required Medical Information**

For bexarotene capsules: Patient has any of the following types of cutaneous T-cell lymphomas: mycosis fungoides, Sezary syndrome, primary cutaneous anaplastic large cell lymphoma, and lymphomatoid papulosis. For primary cutaneous anaplastic large cell lymphoma: 1) The disease is CD30-positive, AND 2) Patient has multifocal lesions, AND 3) bexarotene will be used as a single agent. For lymphomatoid papulosis: 1) The disease is CD30-positive, AND 2) Patient has extensive lesions or symptomatic disease, AND 3) bexarotene will be used as a single agent. For Targretin gel: For cutaneous T-cell lymphoma, patient has a diagnosis of stage I to III mycosis fungoides. For primary cutaneous B-cell lymphoma: 1) Patient has any of the following types: a) primary cutaneous marginal zone lymphoma or b) primary cutaneous follicle center lymphoma AND 2) disease is confined to the skin.

**Covered Uses**

All FDA-approved indications not otherwise excluded from Part D, systemic light chain amyloidosis, Waldenstrom's macroglobulinemia/lymphoplasmacytic lymphoma, recurrent apthous stomatitis, cachexia, HIV-associated diarrhea, Kaposi's sarcoma, Behcet's syndrome, graft-versus-host disease, Crohn's disease, myelofibrosis with myeloid metaplasia

**Exclusion Criteria**

For systemic light chain amyloidosis: Thalomid will be used in combination with dexamethasone or dexamethasone and cyclophosphamide. For Waldenstrom's macroglobulinemia/lymphoplasmacytic leukemia, Thalomid will be used as monotherapy or in combination with rituximab. For multiple myeloma, Thalomid will be used as primary, maintenance, or salvage therapy. If primary and the patient is a stem cell transplant candidate, Thalomid will be used in combination with dexamethasone and bortezomib. If primary and the patient is not a stem cell transplant candidate, Thalomid will be used in combination with melphalan and prednisone. If maintenance, Thalomid will be used as a single agent. If salvage and the patient will be retreated with the same regimen and they are a transplant candidate, Thalomid will be used in combination with dexamethasone and bortezomib. If salvage and the patient will be retreated with the same regimen and they are not a transplant candidate, Thalomid will be used in combination with melphalan and prednisone. If salvage and the patient will not be treated with the same regimen as primary therapy, Thalomid will be used as monotherapy for steroid intolerant patients, or in combination with dexamethasone, dexamethasone and bortezomib, DT-PACE (dexamethasone, cisplatin, doxorubicin, cyclophosphamide, and etoposide), or VTD-PACE (dexamethasone, bortezomib, cisplatin, doxorubicin, cyclophosphamide, and etoposide). For cachexia, cachexia must be due to cancer or HIV-infection. For Kaposi's sarcoma, the patient must be HIV-positive. For graft-versus-host disease, use must be for the treatment of chronic or recurrent disease that is refractory to other therapies. Patient must be a bone marrow transplant recipient. For Crohn's disease, the patient must have failed or been intolerant to prior therapy.

**Age Restrictions**

**Prescriber Restrictions**

**Coverage Duration**

Plan Year

**Other Criteria**

**Prior Authorization Group**

TOBI INHALER

**Drug Names**

TOBI PODHALER

**Covered Uses**

All FDA-approved indications not otherwise excluded from Part D, non-cystic fibrosis bronchiectasis.
### Required Medical Information
The patient has a diagnosis of cystic fibrosis that is confirmed by appropriate diagnostic or genetic testing OR the patient has a diagnosis of non-cystic fibrosis bronchiectasis. Pseudomonas aeruginosa is present in the patient's airway cultures OR the patient has a history of pseudomonas aeruginosa infection or colonization in the airways.

### Age Restrictions

### Prescriber Restrictions

### Coverage Duration
Plan Year

### Other Criteria

### Prior Authorization Group
TOPICAL TACROLIMUS

### Drug Names
TACROLIMUS

### Covered Uses
All FDA-approved indications not otherwise excluded from Part D, Psoriasis on the face or body skin folds.

### Exclusion Criteria

### Required Medical Information
1) The short-term or noncontinuous chronic use to treat moderate to severe atopic dermatitis (eczema) OR 2) The short-term or noncontinuous chronic use to treat psoriasis on the face or body skin folds

### Age Restrictions
Tacrolimus 0.03% 2 years of age or older, Tacrolimus 0.1% 16 years of age or older

### Prescriber Restrictions

### Coverage Duration
Plan Year

### Other Criteria
The patient experienced an inadequate treatment response, intolerance, or contraindication to at least one medium or higher potency topical steroid if Protopic will not be used on the face, body skin folds, genital area, armpit, or around the eyes.

### Prior Authorization Group
TOPICAL TESTOSTERONES

### Drug Names
ANDRODERM, ANDROGEL, ANDROGEL PUMP, AXIRON, FORTESTA, STRIANT, TESTIM, TESTOSTERONE, TESTOSTERONE PUMP, VOGELXO, VOGELXO PUMP

### Covered Uses
All FDA-approved indications not otherwise excluded from Part D.

### Exclusion Criteria

### Required Medical Information
Drug is being prescribed for hypogonadism in a male patient or a patient that self-identifies as male who had or currently has at least two confirmed low testosterone levels according to current practice guidelines or your standard male lab reference values.

### Age Restrictions

### Prescriber Restrictions

### Coverage Duration

### Other Criteria

### Prior Authorization Group
TRELSTAR

### Drug Names
TRELSTAR MIXJECT
Covered Uses

All FDA-approved indications not otherwise excluded from Part D, recurrent prostate cancer, intermediate or high risk prostate cancer in combination with radiation therapy, or very high risk prostate cancer with or without radiation therapy.

Exclusion Criteria

Required Medical Information

If the patient has metastatic disease, node positive disease, or recurrent disease as defined as a biochemical failure after previous therapy, then no further information is required. If the patient has none of the abovementioned criteria and has intermediate or high risk stratification, then Trelstar must be used with external beam radiation therapy. If the patient has none of the abovementioned criteria and has very high risk stratification, Trelstar may be used with external beam radiation unless the patient is not a candidate for definitive therapy.

Age Restrictions

Prescriber Restrictions

Coverage Duration

Plan Year

Other Criteria

Use as neoadjuvant therapy prior to radical prostatectomy is not approvable.

Prior Authorization Group

TYKERB

Drug Names

TYKERB

Covered Uses

All FDA-approved indications not otherwise excluded from Part D, metastatic CNS lesions.

Exclusion Criteria

Required Medical Information

For advanced, recurrent, or metastatic HER2-positive breast cancer, Tykerb must be used in combination with 1) capecitabine or trastuzumab (without cytotoxic therapy) for patients who have received prior trastuzumab-containing regimen, OR 2) aromatase inhibitor (e.g., anastrozole, letrozole, exemestane) for postmenopausal women with hormone receptor positive disease. For metastatic CNS lesions, Tykerb must be used with capecitabine in patients with recurrent HER2-positive breast cancer.

Coverage Duration
Plan Year

Other Criteria

Prior Authorization Group
VIMIZIM

Drug Names
VIMIZIM

Covered Uses
All FDA-approved indications not otherwise excluded from Part D.

Exclusion Criteria
Diagnosis of mucopolysaccharidosis IVA (MPS IVA, Morquio A syndrome) was confirmed by an enzyme assay demonstrating a deficiency in N-acetylgalactosamine 6-sulfatase enzyme activity or by DNA testing.

Required Medical Information

Age Restrictions

Prescriber Restrictions

Coverage Duration
Plan Year

Other Criteria
Appropriate medical support is readily available when Vimizim is administered in the event of anaphylaxis, severe allergic reaction, or acute respiratory failure.

Prior Authorization Group
VOTRIENT

Drug Names
VOTRIENT

Covered Uses
All FDA-approved indications not otherwise excluded from Part D, uterine sarcoma, follicular, papillary, or Hurthle cell thyroid carcinoma.

Exclusion Criteria
**Required Medical Information**

For renal cell carcinoma, the disease is relapsed or medically unresectable. Votrient will be used as a single agent. For soft tissue sarcoma, does not have an adipocytic soft tissue sarcoma or GIST. The patient has angiosarcoma or pleomorphic rhabdomyosarcoma. If so, Votrient will be used as a single agent. If not angiosarcoma or pleomorphic rhabdomyosarcoma, the patient has retroperitoneal/intra-abdominal sarcoma or extremity/superficial trunk sarcoma. If so, the disease is unresectable, progressive, or recurrent and Votrient will be used as a single therapy. For uterine sarcoma, the patient had stage I, II, III, or IV disease. If II, III, or IV, the medication will be used as a single agent. If the patient has stage I disease, the disease is medically inoperable and Votrient will be used as a single agent. For follicular, papillary, or Hurthle cell thyroid carcinoma, Nexavar is not an appropriate option for the patient. The disease is unresectable or metastatic. The disease is radioiodine-refractory. The disease is progressive or symptomatic.

Other Criteria

Prior Authorization Group XGEVA
Drug Names XGEVA
Covered Uses All FDA-approved indications not otherwise excluded from Part D.
Exclusion Criteria
Required Medical Information For bone metastases from prostate cancer (solid tumor), patient has castration-recurrent disease. For giant cell tumor of the bone, patient has unresectable disease or surgical resection is likely to result in severe morbidity. For hypercalcemia of malignancy, condition is refractory to intravenous (IV) bisphosphonate therapy (eg, zoledronic acid, pamidronate) defined as albumin-corrected serum calcium level of greater than 12.5 mg/dL despite IV bisphosphonate therapy.

Age Restrictions
Prescriber Restrictions
Coverage Duration Hypercalcemia of malignancy: initial = 2 months, renewals = Plan Yr. All other dx = Plan Yr.
Other Criteria For hypercalcemia of malignancy renewal requests: patient has demonstrated a response to Xgeva therapy defined as albumin-corrected serum calcium level of 12.5 mg/dL or less. For bone metastases from solid tumors and giant cell tumor of the bone: patient will receive calcium and vitamin D supplementation as needed to treat or prevent hypocalcemia. Coverage under Part D will be denied if coverage is available under Part A or Part B as the medication is prescribed and dispensed or administered for the individual.

Prior Authorization Group XIFAXAN
Drug Names XIFAXAN
Covered Uses All FDA-approved indications not otherwise excluded from Part D, Irritable Bowel Syndrome without constipation.
Exclusion Criteria
Required Medical Information
Age Restrictions 18 years of age or older for reduction in risk of overt hepatic encephalopathy (HE) recurrence.
Prescriber Restrictions
Coverage Duration Reduction in risk of overt hepatic encephalopathy (HE) recurrence- 6 mos, IBS w/o constipation-3 mos
Other Criteria

Prior Authorization Group XOLAIR
Drug Names XOLAIR

Updated 11/01/2016
Covered Uses
All FDA-approved indications not otherwise excluded from Part D.

Exclusion Criteria
For allergic asthma, Xolair will be used in combination with other medications for long-term control of asthma. Patient will have a rapid-acting beta2-agonist available for rescue therapy. For initial therapy, must meet ALL of the following criteria: 1) has a diagnosis of moderate to severe persistent asthma, 2) has positive skin test (or blood test) to at least 1 perennial aeroallergen, 3) has baseline IgE level at or above 30 IU/mL, 4) asthma is inadequately controlled despite use of inhaled corticosteroid at the optimal dose, and 5) patient is optimizing the use of a long-acting inhaled beta2-agonist, leukotriene modifier, or theophylline at the optimal dose. For continuation therapy, patient must have improved asthma control while on Xolair. For chronic idiopathic urticaria, patient initiating Xolair therapy must meet ALL of the following criteria: 1) patient has been evaluated for other causes of urticaria, 2) patient has had itchy hives for at least 6 weeks, 3) patient has remained symptomatic despite H1-antihistamine treatment, and 4) the dose of antihistamine has been optimized. For continuation therapy, patient's symptom has been improved with Xolair treatment. For CIU: 12 years of age or older. For allergic asthma: 6 years of age or older. For chronic idiopathic urticaria: allergist.

Age Restrictions
Plan Year

Prescriber Restrictions
XTANDI

Coverage Duration
Plan Year

Other Criteria
Xolair will be administered in a controlled healthcare setting with access to emergency medications (e.g., anaphylaxis kit).

Prior Authorization Group
XTANDI

Drug Names
XTANDI

Covered Uses
All FDA-approved indications not otherwise excluded from Part D.

Exclusion Criteria
For metastatic, castration-resistant disease, the patient has been previously treated with Zytiga unless the patient has a contraindication, or intolerance, to Zytiga therapy. For disease that is not castration-resistant, Xtandi will be used in combination with androgen deprivation therapy. Xtandi will be used to enhance the effectiveness of radiation therapy, to supplement androgen deprivation therapy if the patient experienced inadequate testosterone suppression, or to prevent androgen flare in androgen deprivation therapy naive patients.

XYREM

Coverage Duration
Plan Year

Other Criteria
XYREM

Prior Authorization Group
XYREM

Drug Names
XYREM

Covered Uses
All FDA-approved indications not otherwise excluded from Part D.
Exclusion Criteria

Required Medical Information

Taking alcohol or sedative hypnotic agents while taking Xyrem.

1) The drug is being prescribed for the treatment of cataplexy in a patient with narcolepsy OR 2) The drug is being prescribed for the treatment excessive daytime sleepiness in a patient with narcolepsy without cataplexy and 3) At least one CNS stimulant drug and one CNS wakefulness promoting drug have been tried and 4) The patient experienced an inadequate treatment response or intolerance to the CNS stimulant drug and CNS promoting wakefulness drug OR 5) the patient has a contraindication to a CNS stimulant drug or a CNS wakefulness promoting drug (NOTE: Examples of a CNS stimulant drug are amphetamine, dextroamphetamine, or methylphenidate. Examples of a CNS wakefulness promoting drug is modafinil or armodafinil. Coverage of modafinil or armodafinil or amphetamines or methylphenidates may require prior authorization).

Age Restrictions

Prescriber Restrictions

Coverage Duration

Other Criteria

Plan Year

If the request is for the continuation of Xyrem, the patient experienced a decrease in daytime sleepiness with narcolepsy or a decrease in cataplexy episodes with narcolepsy.

Prior Authorization Group

YERVOY

Drug Names

YERVOY

Covered Uses

All FDA-approved indications not otherwise excluded from Part D, recurrent melanoma, CNS metastases from primary tumor (melanoma).

Exclusion Criteria

Required Medical Information

For unresectable or metastatic melanoma, Yervoy will be used as a single agent or in combination with nivolumab. For the adjuvant treatment of melanoma: 1) Yervoy will be used as adjuvant therapy following complete resection, including total lymphadenectomy, AND 2) the disease has pathologic involvement of regional lymph nodes of more than 1 millimeter. For CNS metastases from primary tumor (melanoma): 1) Yervoy was active against the primary tumor (melanoma), AND 2) the disease is recurrent.

Age Restrictions

Prescriber Restrictions

Coverage Duration

Other Criteria

Plan Year

Priory Authorization Group

ZAVESCA

Drug Names

ZAVESCA

Covered Uses

All FDA-approved indications not otherwise excluded from Part D.
**Required Medical Information**

Patient has mild to moderate type 1 Gaucher disease. Diagnosis of Gaucher disease was confirmed by an enzyme assay demonstrating a deficiency of beta-glucocerebrosidase enzyme activity or by DNA testing. Enzyme replacement therapy is not a therapeutic option (e.g., due to constraints such as allergy, hypersensitivity, or poor venous access).

**Age Restrictions**

18 years of age or older

**Prescriber Restrictions**

**Coverage Duration**

Plan Year

**Other Criteria**

**Prior Authorization Group**

ZELBORAF

**Drug Names**

ZELBORAF

**Covered Uses**

All FDA-approved indications not otherwise excluded from Part D, melanoma with BRAF V600K mutation, CNS metastases from primary tumor (melanoma), NSCLC with BRAF V600E mutation.

**Exclusion Criteria**

**Required Medical Information**

For melanoma, the tumor is positive for either BRAF V600E or V600K mutation. For CNS metastases, the patient has a diagnosis of melanoma AND Zelboraf was active against primary tumor (melanoma) AND Zelboraf will be used as a single agent. For non-small cell lung cancer (NSCLC), the patient has BRAF V600E mutation.

**Age Restrictions**

**Prescriber Restrictions**

**Coverage Duration**

Plan Year

**Other Criteria**

**Prior Authorization Group**

ZOLINZA

**Drug Names**

ZOLINZA

**Covered Uses**

All FDA-approved indications not otherwise excluded from Part D, mycosis fungoides, Sezary syndrome, multiple myeloma.

**Exclusion Criteria**

**Required Medical Information**

For multiple myeloma: Zolinza will be used as salvage therapy in combination with bortezomib (Velcade).

**Age Restrictions**

**Prescriber Restrictions**

**Coverage Duration**

Plan Year

**Other Criteria**

**Prior Authorization Group**

ZORBTIVE

**Drug Names**

ZORBTIVE

**Covered Uses**

All FDA-approved indications not otherwise excluded from Part D.

**Exclusion Criteria**

Active malignancy, history of malignancy in the past 12 months, previous Zorbotive therapy for longer than 8 week

**Required Medical Information**

Zorbotive will be used in conjunction with optimal management of SBS.
**ZURAMPIC**

- **Age Restrictions**: Prescriber Restrictions: Gastroenterologist or nutritional support specialist
- **Coverage Duration**: Maximum 8 weeks total
- **Prior Authorization Group**: ZURAMPIC
- **Drug Names**: ZURAMPIC
- **Covered Uses**: All FDA-approved indications not otherwise excluded from Part D.
- **Exclusion Criteria**: Severe renal impairment, end stage renal disease, kidney transplant recipient, or dialysis. Tumor lysis syndrome or Lesch-Nyhan syndrome. (Note: Per prescribing information, Zurampic (lesinurad) is contraindicated in patients with severe renal impairment (eClcr less than 30mL/min) and should not be initiated in patients with an eClCr less than 45 mL/min).
- **Required Medical Information**: Zurampic (lesinurad) is being used in combination with a xanthine oxidase inhibitor (i.e., allopurinol or febuxostat).

---

**ZYDELIK**

- **Age Restrictions**: Prescriber Restrictions: Plan Year
- **Coverage Duration**: Plan Year
- **Prior Authorization Group**: ZYDELIK
- **Drug Names**: ZYDELIK
- **Covered Uses**: All FDA-approved indications not otherwise excluded from Part D.
- **Exclusion Criteria**: History of serious allergic reactions including anaphylaxis or toxic epidermal necrolysis.
- **Required Medical Information**: For relapsed chronic lymphocytic leukemia, Zydelig is used in combination with rituximab. For relapsed follicular B-cell non-Hodgkin lymphoma and relapsed small lymphocytic lymphoma, patient has received at least two prior systemic therapies.

---

**ZYKADIA**

- **Age Restrictions**: Prescriber Restrictions: Plan Year
- **Coverage Duration**: Plan Year
- **Prior Authorization Group**: ZYKADIA
- **Drug Names**: ZYKADIA
- **Covered Uses**: All FDA-approved indications not otherwise excluded from Part D, recurrent ALK-positive NSCLC.
- **Exclusion Criteria**: Patient has recurrent or metastatic disease. The tumor is ALK-positive. Patient has progressed on or is intolerant to crizotinib.
